

United States Court of Appeals
for the Fifth Circuit

United States Court of Appeals
Fifth Circuit

FILED

January 6, 2023

Lyle W. Cayce
Clerk

No. 20-51016

MICHAEL CARGILL,

Plaintiff—Appellant,

versus

MERRICK GARLAND, *in his official capacity as U.S. Attorney General*;
UNITED STATES DEPARTMENT OF JUSTICE; STEVEN
DETTELBACH, *in his official capacity as Director of the Bureau of Alcohol,
Tobacco, Firearms, and Explosives*; BUREAU OF ALCOHOL, TOBACCO,
FIREARMS, AND EXPLOSIVES,

Defendants—Appellees.

Appeal from the United States District Court
for the Western District of Texas
USDC No. 1:19-CV-349

Before RICHMAN, *Chief Judge*, and JONES, SMITH, STEWART,
DENNIS, ELROD, SOUTHWICK, HAYNES, GRAVES, HIGGINSON,
WILLETT, HO, DUNCAN, ENGELHARDT, OLDHAM, and WILSON,
Circuit Judges.

JENNIFER WALKER ELROD, *Circuit Judge*, joined by RICHMAN, *Chief Judge*, and JONES, SMITH, STEWART, SOUTHWICK, HAYNES, WILLETT, HO, DUNCAN, ENGELHARDT, OLDHAM, and WILSON, *Circuit Judges*:*

Since the National Firearms Act of 1934, federal law has heavily regulated machineguns. Indeed, as proposed, that law was known to many as “the Anti-Machine Gun Bill.” The possession or transfer of a machinegun was eventually banned through the Gun Control Act of 1968 and the Firearms Owners’ Protection Act of 1986. Today, possession of a machinegun is a federal crime, carrying a penalty of up to ten years’ incarceration.

This appeal concerns a regulation promulgated by the federal Bureau of Alcohol, Tobacco, Firearms, and Explosives, purporting to interpret the federal prohibition on machineguns as extending to bump stocks. A bump stock is a firearm attachment that allows a shooter to harness the natural recoil of a semi-automatic weapon to quickly re-engage the trigger after firing, enabling him to shoot at an increased rate of speed. When ATF first considered the type of bump stocks at issue here, it understood that they were *not* machineguns. ATF maintained this position for over a decade, issuing many interpretation letters to that effect to members of the public.

But ATF reversed its longstanding position in 2018, subjecting anyone who possessed a bump stock to criminal liability. ATF reversed its position to a great extent in response to the tragic events that occurred in Las Vegas

* Of the sixteen members of our court, thirteen of us agree that an act of Congress is required to prohibit bump stocks, and that we therefore must reverse. Twelve members (CHIEF JUDGE RICHMAN and JUDGES JONES, SMITH, STEWART, ELROD, SOUTHWICK, HAYNES, WILLETT, HO, DUNCAN, ENGELHARDT, and WILSON) reverse on lenity grounds. Eight members (JUDGES JONES, SMITH, ELROD, WILLETT, DUNCAN, ENGELHARDT, OLDHAM, and WILSON) reverse on the ground that federal law unambiguously fails to cover non-mechanical bump stocks.

CHIEF JUDGE RICHMAN, JUDGE STEWART, and JUDGE SOUTHWICK concur in the judgment and join in Part V, as does JUDGE HO, who also writes separately. JUDGE OLDHAM concurs in the judgment and joins in Parts I-IV.A. JUDGE HAYNES only concurs in the judgment and writes separately.

on October 1, 2017. On that day, a deranged gunman murdered dozens of innocent men and women, and injured hundreds more. To carry out this appalling crime, the gunman used many weapons and utilized many accessories—including bump stocks.

Public pressure to ban bump stocks was tremendous. Multiple bills to that effect were introduced in both houses of Congress. But before they could be considered in earnest, ATF published the regulation at issue here, short-circuiting the legislative process. Appellant Michael Cargill surrendered several bump stocks to the Government following publication of the regulation at issue. He now challenges the legality of that regulation, arguing that a bump stock does not fall within the definition of “machinegun” as set forth in federal law, and thus that ATF lacked the authority to issue a regulation purporting to define the term as such.

Cargill is correct. A plain reading of the statutory language, paired with close consideration of the mechanics of a semi-automatic firearm, reveals that a bump stock is excluded from the technical definition of “machinegun” set forth in the Gun Control Act and National Firearms Act.

But even if that conclusion were incorrect, the rule of lenity would still require us to interpret the statute against imposing criminal liability. A rich legal tradition supports the “well known rule” that “penal laws are to be construed strictly.” *United States v. Wiltberger*, 18 U.S. (5 Wheat.) 76, 94–95 (1820). As Chief Justice Marshall explained long ago, the rule “is founded on the tenderness of the law for the rights of individuals; and on the plain principle that the power of punishment is vested in the legislative, not in the judicial department. It is the legislature, not the Court, which is to define a crime, and ordain its punishment.” *Id.* at 95.

The Government’s regulation violates these principles. As an initial matter, it purports to allow ATF—rather than Congress—to set forth the

scope of criminal prohibitions. Indeed, the Government would outlaw bump stocks by administrative fiat even though the very same agency routinely interpreted the ban on machineguns as not applying to the type of bump stocks at issue here. Nor can we say that the statutory definition *unambiguously* supports the Government's interpretation. As noted above, we conclude that it unambiguously does not. But even if we are wrong, the statute is at least ambiguous in this regard. And if the statute is ambiguous, Congress must cure that ambiguity, not the federal courts.

The definition of "machinegun" as set forth in the National Firearms Act and Gun Control Act does not apply to bump stocks. And if there were any doubt as to this conclusion, we conclude that the statutory definition is ambiguous, at the very least. The rule of lenity therefore compels us to construe the statute in Cargill's favor. Either way, we must REVERSE.

I

A

The Gun Control Act of 1968 provides that "it shall be unlawful for any person to transfer or possess a machinegun." 18 U.S.C. § 922(o)(1). The Act defines machinegun as follows:

The term "machinegun" means any weapon which shoots, is designed to shoot, or can be readily restored to shoot, automatically more than one shot, without manual reloading, by a single function of the trigger. The term shall also include the frame or receiver of any such weapon, any part designed and intended solely and exclusively, or combination of parts designed and intended, for use in converting a weapon into a machinegun, and any combination of parts from which a machinegun can be assembled if such parts are in the possession or under the control of a person.

26 U.S.C. § 5845(b); *see* 18 U.S.C. § 921(a)(24) (incorporating the definition in the National Firearms Act).

The traditional example of a machinegun¹ is a rifle capable of automatic fire, like the M-16. Semi-automatic rifles like the AR-15 are not machineguns. *See Hollins v. Lynch*, 827 F.3d 436, 440 n.2 (5th Cir. 2016) (The M-16 “is capable of automatic fire, that is to say, firing more than one round per trigger-action. . . . The AR-15 is essentially a semi-automatic version of the M-16, that is to say, it fires only one round per trigger-action.”).

B

To understand what a machinegun is, it is helpful to understand what a machinegun *is not*. To that end, the firing mechanism of a semi-automatic weapon is especially important. The relevant parts are as follows:

The trigger is the interface between the gun’s internal mechanism and the human finger. The sear is the trigger’s top-forward geometric plane, which locks snugly into a groove near the spring of the hammer. The hammer is the spring-loaded element that strikes the firing pin, causing ignition of the

¹ We spell machinegun as being one word because that is how Congress has defined the term in the statutes at issue here.

charge and propulsion of the bullet. The disconnecter is a part that sits on top of the trigger and serves to reset the hammer after a round is fired; this resetting is what makes a semi-automatic weapon semi-automatic.

The mechanics of the firing process are as follows. First, the user pulls the trigger. Doing so disengages the hammer from the sear, allowing the spring to swing the hammer to strike the firing pin, which causes the charge to combust and propel the bullet. The firing of the bullet thrusts the bolt backward, which kicks the hammer into the disconnecter on top of the still-depressed trigger. When the trigger is reset, the hammer is pulled back into the cocked position and secured by the trigger's sear as it slips off the disconnecter. The user may then fire again by pulling the trigger, without having to manually re-cock the hammer. The mechanics are viewed below:²

The end result is that the user of a semi-automatic firearm can fire rapidly by means of repeated use of the trigger. Critically, use of the trigger necessarily corresponds one-to-one with bullets fired. That is, a single pull of the trigger results in a single bullet fired. Without resetting the trigger, the disconnecter cannot reset the hammer to the fully cocked position. And

² This figure is a stationary image taken from an animated graphic that moves to display the relevant motion. The moving image may be found here: https://www.ca5.uscourts.gov/opinions/pub/20/20-51016_ar15.gif

unless the hammer is fully cocked, it will not be able to strike the firing pin with sufficient force to discharge the weapon a second time. (When a weapon fails to fire for this reason, it is said to experience a “hammer follow” malfunction.) In sum, both the hammer and the trigger-disconnector must invariably return full circle before another round can be dispatched.

This process may be contrasted with a fully automatic gun, which is equipped with something called an “auto sear”—a device that serves to recock and release the hammer in tandem with the motion of the bolt for so long as the trigger remains depressed. In other words, the auto sear enables a pendulum swing of the hammer in sync with the bolt without any further input from the user; with one pull of the trigger, an automatic weapon can shoot continuously until ammunition is depleted.

C

The statutory definition of a machinegun also includes devices that convert an ordinary firearm into a machinegun. *See United States v. Camp*, 343 F.3d 743 (5th Cir. 2003) (holding that a switch—which, if flipped, would cause a semi-automatic rifle to fire continuously—is a device that turns an ordinary firearm into a machinegun). The issue presented here is whether a bump stock is such a device.

A bump stock is an accessory that attaches to a semi-automatic weapon and assists the shooter to engage in bump firing. Bump firing, in turn, is a technique whereby a shooter uses a firearm’s natural recoil to quickly reengage the trigger, resulting in an increased rate of fire. It is possible to bump fire an ordinary semi-automatic rifle without any assisting device, but a bump stock makes the technique easier.

A typical bump stock consists of a sliding shoulder stock molded to a grip, a trigger ledge where the shooter places his finger, and a detachable

rectangular receiver module that goes into the receiver well of the bump stock's handle to guide the recoil of the weapon when fired. To begin bump firing, the shooter presses forward on the firearm's forebody to bump into the trigger finger. The gun then slides back and forth, and the recoil energy forces the gun backward, re-engaging the trigger. The shooter maintains forward pressure on the gun's forebody, again causing the trigger to bump into the trigger finger, maintaining fire. The firing process may be viewed as follows:³

In summary, a bump stock combines with a semi-automatic weapon to facilitate the repeated function of the trigger. To be sure, it makes the process faster and easier. But the mechanics remain exactly the same: the firing of each and every round requires an intervening function of the trigger. This does not alter the form of manual input that the user must provide to discharge the weapon. Without a bump stock or the use of an alternative bump technique, the user must provide manual input by pulling the trigger with the muscles of his trigger finger. With a bump stock, the shooter need not pull

³ This figure is a stationary image taken from an animated graphic that moves to display the relevant motion. The moving image may be found here: https://www.ca5.uscourts.gov/opinions/pub/20/20-51016_bump_fire_animation.gif

and release his trigger finger. But the shooter must still apply forward pressure to the weapon's forebody in order to maintain the shooting mechanism. Again, the manual input remains, even though its form changes.

We note one important distinction. Some bump stocks—called mechanical bump stocks—are equipped with springs or other internal mechanical devices that automatically assist the shooter to engage in bump firing. For such a bump stock, the shooter does not have to maintain pressure on the barrel and trigger ledge in order to maintain this firing sequence. Only non-mechanical bump stocks are at issue in this case.

D

Bump stocks were first invented in the early 2000s. Historically, ATF distinguished between mechanical and non-mechanical bump stocks in categorizing a particular accessory as a machinegun. This categorization is done through ATF's Firearms Technology Branch, which is authorized to issue classification letters upon request from members of the public. *See* 26 U.S.C. § 5841(c) (requiring firearm manufacturers and possessor to receive "authorization"); Bureau of Alcohol, Tobacco, Firearms and Explosives, *National Firearms Handbook* § 7.2.4 (setting forth the classification process). When ATF first considered mechanical bump stocks in 2006, it categorized them as machineguns: "[A] device attached to a semiautomatic firearm that uses an internal spring to harness the force of a firearm's recoil so that the firearm shoots more than one shot with a single pull of the trigger is a machinegun." 83 Fed. Reg. at 66514. ATF maintains that categorization.

But from the time ATF first considered non-mechanical bump stocks to 2017, it categorized that type of bump stock as not being a machinegun. In that time, the Firearms Technology Branch issued dozens of classification letters regarding non-mechanical bump stocks, each time arriving at the same conclusion. One letter from 2010 is illustrative:

Dear [Applicant], This is in reference to your submission . . . asking for an evaluation of a replacement shoulder stock for an AR-15 type rifle. Your letter advises that the stock (referenced in this reply as a “bump-stock”) is intended to assist persons whose hands have limited mobility to “bump-fire” an AR-15 type rifle. . . . The stock has no automatically functioning mechanical parts or springs and performs no automatic mechanical function when installed. In order to use the installed device, the shooter must apply constant forward pressure with the non-shooting hand and constant rearward pressure with the shooting hand. Accordingly, we find that the “bump-stock” is a firearm part and is not regulated as a firearm under the Gun Control Act or the National Firearms Act.

However, bump-stock classification reached a point of inflection on October 1, 2017. On that day, a gunman murdered over 50 innocent men and women in Las Vegas, and injured 500 more. He used several weapons, many of which were equipped with extended magazines and bump stocks. These tragic events thrust bump stocks into the center of national attention.

Within ten days of the shooting, two bills prohibiting bump-stock devices were proposed in Congress. *See Automatic Gunfire Prevention Act*, H.R. 3947, 115th Cong. (2017)⁴; *To Amend Title 18, United States Code, To Prohibit the Manufacture, Possession, or Transfer of Any Part or Combination of Parts That is Designed and Functions to Increase the Rate of Fire of a Semi-automatic Rifle*, H.R. 3999, 115th Cong. (2017). While Congress debated the bills, ATF published a notice of proposed rulemaking, intending to reverse its previous interpretation that non-mechanical bump stocks are not machineguns for purposes of the National Firearms Act and Gun Control Act. Notice of Proposed Rulemaking, *Bump-Stock-Type Devices*, 83 Fed. Reg. 13442 (Mar. 29,

⁴ An identical bill was proposed in the Senate. *Automatic Gunfire Prevention Act*, S. 1916, 115th Cong. (2017).

2018). Senator Diane Feinstein—who sponsored one of the bills mentioned above—expressed concern with the proposed rule:

Until today, the ATF has consistently stated that bump stocks could not be banned through regulation because they do not fall under the legal definition of a machine gun.

Now, the department has done an about face, claiming that bump stocks do fall under the legal definition of a machine gun and it can ban them through regulations. The fact that ATF said as recently as April 2017 that it lacks this authority gives the gun lobby and its allies even more reason to file a lawsuit to block the regulations.

Unbelievably, the regulation hinges on a dubious analysis claiming that bumping the trigger is not the same as pulling it. The gun lobby and manufacturers will have a field day with this reasoning. What’s more, the regulation does not ban all devices that accelerate a semi-automatic weapon[’]s rate of fire to that of a machine gun.

Both Justice Department and ATF lawyers know that legislation is the only way to ban bump stocks. The law has not changed since 1986, and it must be amended to cover bump stocks and other dangerous devices like trigger cranks. Our bill does this—the regulation does not.

Press Release, Sen. Dianne Feinstein, *Feinstein Statement on Regulation to Ban Bump Stocks* (Mar. 23, 2018). ATF continued with the rulemaking process, publishing the final rule later that year. Final Rule, *Bump-Stock-Type Devices*, 83 Fed. Reg. 66514 (Dec. 26, 2018).⁵ The Final Rule purported to modify the definition of machinegun as follows:

⁵ Acting Attorney General Matthew Whitaker initially signed the Final Rule, but some questioned his authority to do so. In response, Attorney General William Barr ratified the Final Rule upon his being sworn into office. 84 Fed. Reg. 9239 (Mar. 14, 2019).

A “machinegun,” “machine pistol,” “submachinegun,” or “automatic rifle” is a firearm which shoots, is designed to shoot, or can be readily restored to shoot, automatically more than one shot, without manual reloading, by a single function of the trigger. The term shall also include the frame or receiver of any such weapon, any part designed and intended solely and exclusively, or combination of parts designed and intended, for use in converting a weapon into a machinegun, and any combination of parts from which a machinegun can be assembled if such parts are in the possession or under the control of a person. For purposes of this definition, the term “automatically” as it modifies “shoots, is designed to shoot, or can be readily restored to shoot,” means functioning as the result of a self-acting or self-regulating mechanism that allows the firing of multiple rounds through a single function of the trigger; and “single function of the trigger” means a single pull of the trigger and analogous motions. The term “machinegun” includes a bump-stock-type device, *i.e.*, a device that allows a semi-automatic firearm to shoot more than one shot with a single pull of the trigger by harnessing the recoil energy of the semi-automatic firearm to which it is affixed so that the trigger resets and continues firing without additional physical manipulation of the trigger by the shooter.

83 Fed. Reg. at 66553–54.

E

Plaintiff Michael Cargill lawfully acquired two non-mechanical bump stocks but surrendered them to ATF after passage of the Final Rule. He then sued ATF and other federal defendants, bringing several claims under the Administrative Procedure Act. First, he contends that ATF lacked authority to promulgate the Final Rule because its interpretation of machinegun conflicts with the unambiguous statutory definition. And even if the statute is ambiguous, Cargill says, it should be construed in his favor because of the

rule of lenity. And because the statute concerns criminal penalties, the Government's interpretation is not entitled to deference under *Chevron USA, Inc. v. Natural Resources Defense Council, Inc.*, 467 U.S. 837 (1984). Cargill also argues that the Final Rule constitutes an unconstitutional exercise of legislative power by an administrative agency.

After a one-day bench trial, the district court entered judgment for the Government. *Cargill v. Barr*, 502 F. Supp. 3d 1163 (W.D. Tex. 2020). It declined to apply *Chevron* but found that the Government's new interpretation of machinegun is the best reading of the relevant statute. The district court also rejected Cargill's nondelegation claim. A panel of this court affirmed, concluding that the Final Rule's interpretation of machinegun is the best reading of the statute, and declining to reach *Chevron* or the nondelegation question. *Cargill v. Garland*, 20 F.4th 1004 (5th Cir. 2021). We granted rehearing *en banc*, vacating the panel opinion. 37 F.4th 1091.

II

Three of our sister circuits have reviewed preliminary-injunction motions relating to the Final Rule. The issues engendered great disagreement, but each circuit that has addressed them agrees that the definition of machinegun within the National Firearms Act and Gun Control Act does not unambiguously mean what the Government says it means. Each circuit ultimately denied preliminary injunctive relief, and the Supreme Court denied each of the certiorari petitions. *See, e.g., Guedes v. ATF*, 140 S. Ct. 789, 791 (2020) (Gorsuch, J., statement respecting denial of certiorari) (“Despite these concerns, I agree with my colleagues that the interlocutory petition before us does not merit review.”).

A divided D.C. Circuit panel determined that the Final Rule is ambiguous, but applied *Chevron* deference to the Government's statutory interpretation. *Guedes v. ATF*, 920 F.3d 1 (D.C. Cir. 2019). The dissent contended

that the Final Rule contradicts the statute's plain meaning. *Id.* at 35 (Henderson, J., concurring in part and dissenting in part). Although the Supreme Court denied certiorari, 140 S. Ct. 789 (2020), one Justice wrote separately to explain his view that *Chevron* does not apply because (i) the Government had expressly waived its application, (ii) it does not apply to regulations bearing criminal sanctions, and (iii) the Final Rule directly contradicts the Government's previous interpretation. *Id.* at 789–91 (Gorsuch, J., statement respecting denial of certiorari).

In another divided opinion, the Tenth Circuit reached the same conclusion as the D.C. Circuit: that the Final Rule was ambiguous and entitled to *Chevron* deference. *Aposhian v. Barr*, 958 F.3d 969 (10th Cir. 2020); *see id.* at 991 (Carson, J., dissenting). The court initially granted rehearing *en banc*, vacating the panel decision, 973 F.3d 1151 (10th Cir. 2020) (*en banc*), but later vacated the order as improvidently granted, reinstating the former opinion. *Aposhian v. Wilkinson*, 989 F.3d 890 (10th Cir. 2021) (*en banc*), *cert denied sub nom. Aposhian v. Garland*, 143 S. Ct. 83 (2022). Three dissents were written, each of which was joined by five of the eleven participating judges. The first dissent would have held that (i) the statute unambiguously does not apply to bump stocks, (ii) *Chevron* does not apply either because the Government waived it or because it does not apply in the criminal context, and (iii) the Final Rule may violate nondelegation principles. *Id.* at 891–903 (Tymkovich, C.J., dissenting); *see also id.* at 903–04 (Hartz, J., dissenting); *id.* at 904–06 (Eid, J., dissenting); *id.* at 906–08 (Carson, J., dissenting).

Finally, in yet another divided opinion, a Sixth Circuit panel ruled against the Government, declining to apply *Chevron* deference and holding the statutory definition of machinegun does not include bump stocks. *Gun Owners of America, Inc. v. Garland*, 992 F.3d 446, 450 (6th Cir. 2021); *but see id.* at 475–92 (White, J., dissenting) (arguing that *Chevron* applies and that the Government's interpretation is reasonable). The court granted rehearing *en*

banc, 2 F.4th 576 (6th Cir. 2021) (en banc), and an evenly-divided court affirmed the district court’s denial of the preliminary injunction. 19 F.4th 890 (6th Cir. 2020), *cert denied*, 143 S. Ct. 83 (2022).

In addition to these circuit decisions, the Navy-Marine Corps Court of Criminal Appeals considered the Final Rule in the context of a criminal prosecution for possession of a machinegun. *See United States v. Alkazahg*, 81 M.J. 764, 780–81 (N–M. Ct. Crim. App. 2021). That court determined that, under the best reading of the statutory language, a bump stock is not a machinegun. But it ultimately found that the statute is ambiguous and applied the rule of lenity to construe the statute against imposing criminal liability. It dismissed the charge for possession of a machinegun.

III

Our primary task is to interpret the meaning of machinegun as defined in 26 U.S.C. § 5845(b). Of course, the Government has sponsored its own interpretation, as expressed in the Final Rule. Ordinarily, that action would invoke the two-step *Chevron* framework. As we recently summarized, “[a]t step one, we ask whether Congress has directly spoken to the precise question at issue, in which case we must give effect to the unambiguously expressed intent of Congress and reverse an agency’s interpretation that fails to conform to the statutory text.” *Huawei Technologies USA, Inc. v. FCC*, 2 F.4th 421, 433 (5th Cir. 2021) (quotations omitted).

But here, the Government has declined to invoke *Chevron* in any of the lawsuits challenging the Final Rule. Nonetheless, several circuits have applied *Chevron* deference to challenges of the Final Rule, and so we will consider *Chevron*’s applicability below. But before we do, we determine the statute’s meaning using traditional statutory-interpretation tools. That is, “the old-fashioned way.” *Guedes*, 140 S. Ct. at 790 (Gorsuch, J., statement respecting denial of certiorari); *see also Guedes*, 920 F.3d at 42 (Henderson, J.,

concurring in part and dissenting in part); *Aposhian*, 989 F.3d at 898 (Tymkovich, C.J., dissenting). If the statute is unambiguous, it does not matter whether *Chevron* applies. See, e.g., *Western Refining Southwest, Inc. v. FERC*, 636 F.3d 719, 727 (5th Cir. 2011) (“[If] the statute’s text is unambiguous, we need not proceed to Step Two of *Chevron*.”).

Recall that in this circumstance, Congress has defined machinegun to mean “any weapon which shoots . . . automatically more than one shot . . . by a single function of the trigger,” or any accessory that allows a firearm to shoot in that manner. 26 U.S.C. § 5845(b). The parties dispute whether the fire created by a semi-automatic rifle equipped with a non-mechanical bump stock is produced both “automatically” and “by single function of the trigger.” We address those components in reverse order.⁶

A

The first phrase we consider is “by a single function of the trigger.” At the time the statute was passed, “function” meant “action.” *Webster’s New International Dictionary* 1019 (2d ed. 1934); see *Guedes*, 920 F.3d at 43 (Henderson, J., concurring in part and dissenting in part); *Aposhian*, 989 F.3d at 895 (Tymkovich, C.J., dissenting). Thus, the relevant question is whether

⁶ Cargill also argues that the Final Rule is void because it is a legislative rule—as opposed to an interpretive rule—and because relevant federal law does not authorize ATF to issue such a rule. We assume *arguendo* that the Final Rule is legislative in nature and that ATF is authorized to issue such a rule. First, if the rule were interpretive in nature, it would not be eligible for *Chevron* deference. *United States v. Mead Corp.*, 533 U.S. 218, 232 (2001). But as explained *infra*, three independent reasons demand that we not defer to the Government here. Second, if ATF were not authorized to promulgate legislative rules, the rule at issue would be void. Ultimately, however, we conclude that the Government’s interpretation is inconsistent with the statutory definition, so ATF lacked authority to issue the Final Rule. We therefore need not consider Cargill’s additional argument that the Final Rule is a legislative rule.

a semi-automatic rifle equipped with a non-mechanical bump stock fires more than one shot each time the trigger “acts.”

It does not. As illustrated above, a semi-automatic weapon utilizes a simple mechanical process: the trigger disengages the hammer from the sear, the hammer strikes the firing pin, the bullet fires, and the recoil pushes the hammer against the disconnecter, which resets the trigger. This process happens every single time one bullet is fired. To be sure, a non-mechanical bump stock increases the rate at which the process occurs. But the fact remains that only one bullet is fired each time the shooter pulls the trigger.

The Government contends that “single function of the trigger” means “a single pull of the trigger and analogous movements.” 83 Fed. Reg. at 66553. That is, according to the Government, “function” means “pull.” But that argument fails on its face because a shooter still pulls the trigger of a semi-automatic weapon equipped with a non-mechanical bump stock each time he or she fires a bullet. Without a bump stock, the trigger activates because the shooter flexes his or her finger; with a bump stock, the trigger activates because the recoil of the previous shot re-engages the trigger and the shooter’s maintained force on the gun’s forebody bumps the trigger against the shooter’s finger. This is a distinction without a difference—the end result in both cases is that the trigger is pulled. *See Guedes*, 920 F.3d at 48 (Henderson, J., concurring in part and dissenting in part) (“A semiautomatic rifle shoots a single round per pull of the trigger and the bump stock changes only *how* the pull is accomplished.”); *Gun Owners of America*, 992 F.3d at 469–73, *vacated*, 2 F.4th 576. Even if “single function” meant “single pull,” the definition would still not include a non-mechanical bump stock. Moreover, even though pulling the trigger can sometimes begin the bump firing sequence, the process is more typically begun by pushing forward on the forebody of the firearm.

For several of our sister circuits, however, the plain language is not so plain. They reason that single function of the trigger “could mean ‘a single pull of the trigger from the perspective of the shooter.’” *Guedes*, 920 F.3d at 29; *see also Gun Owners of America*, 19 F.4th at 905 (White, J., in support of affirmance). Considering the definition of “function,” one court understood the issue as such: “[T]hat definition begs the question of whether ‘function’ requires our focus upon the movement of the trigger, or the movement of the trigger finger. The statute is silent in this regard.” *Aposhian*, 958 F.3d at 986. According to that logic, for a semi-automatic rifle equipped with a non-mechanical bump stock, the act of pulling the trigger—which begins the bump firing sequence—is a single pull for purposes of the Gun Control Act and National Firearms Act.

The problem with that interpretation is that it is based on words that do not exist in the statute. The statute “uses ‘single function of the trigger,’ not single function of the shooter’s trigger finger.” *Guedes*, 920 F.3d at 48 (Henderson, J., concurring in part and dissenting in part); *see also Aposhian*, 989 F.3d at 895 (Tymkovich, C.J., dissenting) (“The statute speaks only to how the trigger acts, making no mention of the shooter.”). The Navy-Marine Corps Court of Appeals likewise refused to read words into the statute:

The best read implies that the shooter initiates the trigger function by some action, such as pulling the trigger—or it could be by just pushing a button—and it is the follow-on action where the trigger acts out its mechanical design or purpose that speaks to the “function of the trigger.” The statute does not say “by a single function of the trigger finger” nor does it say “by a single pull of the trigger in addition to external pressure from the shooter’s non-firing hand.” . . . Had Congress wanted to use the phrase “by a single pull of the trigger” for *machine guns*, it could have. But it did not.

Alkazahg, 81 M.J. at 780–81.

We agree. The statutory definition of machinegun utilizes a grammatical construction that ties the definition to the movement of the trigger itself, and not the movement of a trigger finger. Nor do we rely on grammar alone. Context firmly corroborates what grammar initially suggests by demonstrating that Congress knew how to write a definition that is keyed to the movement of the trigger finger if it wanted to. But it did not. The Government offers nothing to overcome this plain reading, so that we are obliged to conclude that the statutory definition of machinegun unambiguously turns on the movement of the trigger and not a trigger finger.

Grammar rejects a reading based on the shooter's perspective. Each component of the statutory definition supports the mechanical perspective, not a shooter's perspective. Again, the definition reads as follows: "[M]achinegun means . . . any weapon which shoots . . . automatically more than one shot . . . by a single function of the trigger." 26 U.S.C. § 5845(b). The subject of the sentence, of course, is *machinegun*. The linking verb *means* connects the subject to the subject complement—*weapon*. Next, the adjectival phrase *which shoots* modifies *weapon*. The adverbial phrase *automatically more than one shot* then modifies *shoots*. Finally, two prepositional phrases follow. The first, *by a single function*, modifies the adverbial phrase. The second, *of the trigger*, modifies the first prepositional phrase. *See also Guedes*, 920 F.3d at 44 n.13 (Henderson, J., concurring in part and dissenting in part) (diagramming the statutory definition).

The first thing to note is that the ultimate subject is *machinegun*, and the subject complement is *weapon*. In other words, a machinegun is defined by reference to what kind of weapon it is. But identifying the subject of the sentence is only our first step. We next look, second, to the fact that the term *weapon* is defined by how it *shoots*. So, again, the definition refers to the device being made to shoot, not the person or thing doing the shooting. Third, the manner of shooting must be automatic. Fourth—and critically—the

prepositional phrases define the firing process’s requirements from a mechanical perspective. The process must occur by a *single function*, and the single act must be *by the trigger*. In short, there is no mention of a shooter. The grammatical structure continuously points the reader back to the mechanics of the firearm. The statute does not care what human input is required to activate the trigger—it cares only whether more than one shot is fired each time the trigger acts.

We do not stop with the grammar. With statutes, “[c]ontext is a primary determinant of meaning. Antonin Scalia & Bryan A. Garner, *Reading Law: The Interpretation of Legal Texts* 167 (2012). So, we look next to context for further clues. And context confirms that the statute must be read from the mechanical perspective. Specifically, context tells us that Congress knew how to write a definition that explicitly turns on the action of a shooter rather than the action of a trigger, but chose not to do so here. Immediately following the definition of machinegun provided in 26 U.S.C. § 5845(b), Congress defined the term “rifle” to mean a weapon designed “to use the energy of the explosive in a fixed cartridge to fire only a single projectile through a rifled bore *for each single pull of the trigger.*” § 5845(c) (emphasis added). The statute next defines “shotgun” to mean a weapon designed “to use the energy of the explosive in a fixed shotgun shell to fire through a smooth bore either a number of projectiles (ball shot) or a single projectile *for each pull of the trigger.*” *Id.* § 5845(d) (emphases added). “[W]here the document has used one term in one place, and a materially different term in another, the presumption is that the different term denotes a different idea.” *Reading Law* at 170.

To summarize, the definition of machinegun must turn on the action (or “function”) of the trigger because no other actor is mentioned or implied. This conclusion is only strengthened by the fact that other definitions within the same statutory provision explicitly turn on the action of a shooter, showing that Congress knew how to write a definition that proceeds from a

shooter’s perspective, rather than a mechanical one, if it had wanted to. The notion that the definition turns on the action of an unnamed shooter is inconsistent with both the grammatical and statutory contexts.

The Government says that this straightforward interpretation defies common sense. It would not have been prudent for Congress to “zero[] in on the mechanistic movement of the trigger,” the Government says, because the problem sought to be remedied was “the ability to drastically increase a weapon’s rate of fire.” *Aposhian v. Barr*, 374 F. Supp. 3d 1145, 1152 (D. Utah 2019)). Perhaps Congress’s choice of words was prudent, or perhaps it was not. That is not for us to decide. But the Government’s objection only accentuates the fact that Congress did not use words describing the shooter’s perspective or the weapon’s rate of fire. *See Alkazahg*, 81 M.J. at 781 (“Congress could have suggested that a shooter-focused approach or even a rate-of-fire approach was the way to read the statute by enacting those words. Even the term ‘machine gun’ suggests a mechanical approach where the shooter interaction is extremely limited.”). Instead, it made up an entirely new phrase—by a single function of the trigger—that specifically pertains to the mechanics of a firearm. Prudent or not, Congress defined the term “machinegun” by reference to the trigger’s mechanics. We are bound to apply that definition as written.⁷

⁷ Although our reasoning is independently sufficient to support our conclusion, the application of corpus linguistics only provides further support. A search in the Corpus of Historical American English, which contains more than 100,000 individual texts from the 1820s–2010s and more than 475 million words, shows zero usage of the phrase “function of the trigger,” “function of a trigger,” “function of triggers,” or “function of the triggers.” Corpus of Historical American English, English Corpora, <https://www.english-corpora.org/coha/>. Similarly, a search in the News on the Web Corpus (NOW Corpus), which contains more than 16 billion words from more than 27 million online texts from 2010 to present day, shows only 24 uses of the phrase “function of the trigger”—all of

The Government also points to our decision in *United States v. Camp*, arguing that it controls here. 343 F.3d 734. It does not. But to the extent *Camp* applies, it supports Cargill’s position. The issue presented in *Camp* was whether something other than the metal lever that ordinarily begins the firing process can be a “trigger” for purposes of the Gun Control Act and National Firearms Act. The defendant there modified a semi-automatic rifle, building a switch behind the original trigger that, when pulled, “supplied electrical power to a motor connected to the bottom of a fishing reel that had been placed inside the weapon’s trigger guard; the motor caused the reel to rotate; and that rotation caused the original trigger to function in rapid succession.” 343 F.3d at 744. We held that the weapon was a machinegun even though the gun’s original trigger activated each time a bullet was fired. That was so because the gun had been modified such that it had a new trigger. As we held in *United States v. Jokel*, 969 F.2d 132, 135 (5th Cir. 1992), a trigger is just the “mechanism . . . used to initiate the firing sequence.” The mechanism used to initiate the firing sequence in *Camp* was the new switch. That switch operated by a single function, and so the firearm met the statutory definition of a machinegun. *Camp*, 343 F.3d at 745.

Here, no party cites *Camp* for the proposition that the legally relevant trigger is anything other than the traditional trigger. And for good reason. All a non-mechanical bump stock does is allow the shooter to fire at an increased rate by harnessing a weapon’s natural recoil to re-engage the trigger,

which are from news sources directly quoting a firearm statute; there were zero uses of the phrase “function of a trigger,” “function of triggers,” or “function of the triggers.” NOW Corpus, English Corpora, <https://www.english-corpora.org/now/>. The upshot is that the phrase “by a single function of the trigger” is a novel phrase created by Congress specifically to be used in these firearm statutes. The Government stresses the existence of other ordinary phrases, like “pull of the trigger.” Perhaps these ordinary phrases exist, but Congress did not use them here.

and by using the shooter’s maintained forward force. The case might well be different if we were considering a semi-automatic weapon equipped with a *mechanical* bump stock. It could be the case that a switch activating a mechanical bump stock would be the legal trigger. But we are not considering that case.⁸ Here, the definition of “trigger” is not in dispute. If anything, *Camp* supports our conclusion because the trigger at issue in this case is different in kind from the trigger at issue there.

B

Even if a non-mechanical bump stock caused a semi-automatic rifle to operate by a single function of the trigger, the rifle would still need to operate automatically in order to be a machinegun.⁹ All generally agree that here, automatically means “self-acting.” *Oxford English Dictionary* at 574 (1933) (“[s]elf-acting under conditions fixed for it, going of itself”); *see also Cargill*, 20 F.4th at 1012; *Guedes*, 920 F.3d at 30; *id.* at 43 (Henderson, J. concurring in part and dissenting in part); *Aposhian*, 958 F.3d at 986; *Aposhian*, 989 F.3d at 895 (Tymkovich, C.J., dissenting); *Gun Owners of America*, 19 F.4th at

⁸ The Government points to an unpublished Eleventh Circuit case—which held that a mechanical bump stock called the Akins Accelerator is a machinegun for purposes of federal law—as support for its argument that non-mechanical bump stocks operate by a single function of the trigger. *See Akins v. United States*, 312 F. App’x 197, 200 (11th Cir. 2009). But that evidence cuts in the other direction. Unlike non-mechanical bump stocks, a shooter using an Akins Accelerator need only pull the trigger once to activate the firing sequence. The mechanical bump stock then maintained the bump fire of its own accord. *See* 83 Fed. Reg. at 66517. Precisely for that reason, our decision today would not apply to an Akins Accelerator.

⁹ As explained above, because a semi-automatic firearm equipped with a non-mechanical bump stock does not operate “by a single function of the trigger,” such a weapon is not a machinegun, and we must render judgment for *Cargill*. Our conclusions in Parts III.B and V are each independent, alternative holdings. In the Fifth Circuit, “alternative holdings are binding precedent and not *obiter dictum*.” *Jarkesy v. SEC*, 34 F.4th 446, 459 n.9 (5th Cir. 2022) (quotation omitted).

905–06 (White, J., in support of affirmance); *id.* at 912–13 (Murphy, J., in opposition to affirmance). But the parties dispute whether the firing process enabled by a non-mechanical bump stock is self-acting.

It is not. As an initial matter, we must remember that the phrase “by a single function of the trigger” modifies the adverb “automatically.” Thus, the condition is satisfied only if it is the trigger that causes the firearm to shoot automatically. *See Guedes*, 920 F.3d at 43 (Henderson, J., concurring in part and dissenting in part) (“‘Automatically’ cannot be read in isolation. On the contrary, it is modified—that is, limited—by the clause ‘by a single function of the trigger.’”); *Aposhian*, 989 F.3d at 896 (Tymkovich, C.J., dissenting). That is not how a bump stock works. Bump firing does not maintain if all a shooter does is initially pull the trigger. Rather, to continue the firing after the shooter pulls the trigger, he or she must maintain manual, forward pressure on the barrel and manual, backward pressure on the trigger ledge.

The Government argues that, taken together, those actions create automatic fire. But *Cargill* would prevail even if that were true because those actions are not “a single function of the trigger.” For example, the ATF’s treatment of the Ithaca Model 37 “slam fire” shotgun confirms that bump stocks do not enable automatic fire. With the Model 37, a shooter can pull the trigger once and hold it. Then, after each pump with the shooter’s non-trigger hand, a new shell is loaded and immediately discharged. According to the ATF, the Model 37 fires multiple shots by a single function of the trigger, but it does not do so automatically because the shooter must manually pump the shotgun with his non-trigger hand. *See* 83 Fed. Reg. at 66,534. By this same logic, a rifle equipped with a non-mechanical bump stock does not fire automatically because the shooter must manually apply forward pressure on the barrel with his or her non-trigger hand.

The Government recognizes this logic but argues that it proves too much. After all, the Government says, to operate a traditional automatic rifle, the shooter must pull *and hold* the trigger to fire more than one round. No one doubts that a traditional automatic weapon is a machinegun for purposes of federal law. And so it cannot be that a process is not automatic simply because it requires sustained input. *See Guedes*, 920 F.3d at 31; *Aposhian*, 958 F.3d at 987.

That argument makes the same mistake as before: it untethers “single function of the trigger” from “automatically.” Restated, the statute requires that a machinegun be capable of firing automatically once the *trigger* performs a single function. An automatic weapon satisfies this requirement because the act of pulling and holding the trigger is one function, and that function produces more than one shot. That force must be maintained on the trigger does not change this conclusion. Stated succinctly:

[A] gun shoots automatically by a single function of the trigger as long as the shooter need only manually cause the trigger to engage in a “single” function in order to fire multiple shots . . . So a typical machine gun qualifies even though the shooter pulls the trigger *and* keeps it pressed down because that combined external influence still does no more than result in one action of the trigger.

Gun Owners of America, 19 F.4th at 915 (Murphy, J., in opposition to affirmation); *see also Guedes*, 920 F.3d at 44 (Henderson, J., concurring in part and dissenting in part) (“The statutory definition of machinegun does not include a firearm that shoots more than one round automatically by a single pull of the trigger and then some (that is, by constant forward pressure with the non-trigger hand).”) (internal quotation marks omitted and emphasis omitted). As understood by the Navy-Marine Corps Court of Appeals:

It is incorrect to equate the holding of the trigger in an automatic weapon with the holding of the trigger and the forward motion in a semi-automatic weapon equipped with a bump stock. That is because the former is shooting automatically *by a single function of the trigger*, while the latter is relying on an additional human action beyond the mechanical self-acting and impersonal trigger function.

Alkazahg, 81 M.J. at 782–83.

We reiterate that a shooter can bump fire an ordinary semi-automatic rifle even without a bump stock. But nobody, not even the Government, contends that semi-automatic rifles are machineguns. That concession damns the Government’s position. As Cargill recognizes, if ordinary bump firing constituted automatic fire, the Final Rule would “convert a semiautomatic weapon into a machinegun simply by how a marksman used the weapon.” That absurd result reveals the flaw in the Government’s line of reasoning.

In addition to implying absurd results, the Government’s position is quite telling. It would allow the use of semi-automatic rifles, which can bump fire, but prohibit the use of non-mechanical bump stocks, even though there is no mechanical difference between the two forms of gunfire. Rather, the meaningful difference is that, with a non-mechanical bump stock, bump firing is easier and can occur at a faster rate. That is a distinction Congress certainly could have addressed in the National Firearms Act and Gun Control Act. But Congress did not prohibit machineguns according to how quickly they fire. It prohibited machineguns according to *the way* that they fire. And semi-automatic weapons do not fire “automatically,” even when equipped with a non-mechanical bump stock.

* * *

The definition of machinegun as set forth in the Gun Control Act and National Firearms Act establishes two conditions that must obtain in order for a weapon to qualify. The weapon must operate “automatically” and “by single function of the trigger.” According to the statute’s unambiguous language, neither condition obtains as applied to a semi-automatic rifle equipped with a non-mechanical bump stock. The failure of either condition is sufficient to entitle Cargill to judgment.

IV

As introduced above, several of our sister circuits applied *Chevron* to challenges to this Final Rule, even though no party requested its application. Because we hold that the statute is unambiguous, *Chevron* deference does not apply even if the *Chevron* framework does. See *Western Refining Southwest*, 636 F.3d at 727. But if the statute were ambiguous, *Chevron* would not apply for any of the three reasons explained below.

A

First, *Chevron* does not apply for the simple reason that the Government does not ask us to apply it. Indeed, the Government affirmatively argued in the district court that *Chevron* deference is unwarranted. As other jurists have recognized in this context, that means that the *Chevron* argument has been waived—not merely forfeited. *United States v. Olano*, 507 U.S. 725, 733 (1993) (“Whereas forfeiture is the failure to make the timely assertion of a right, waiver is ‘the intentional relinquishment or abandonment of a known right.’”) (quoting *Johnson v. Zerbst*, 304 U.S. 458, 464 (1938)); *Guedes*, 920 F.3d at 21 (“To the extent *Chevron* treatment can be waived, we assume that the government’s posture in this litigation would amount to a waiver rather than only a forfeiture.”); *Aposhian*, 989 F.3d at 897 (“[W]hen a party chooses not to pursue a legal theory potentially available to it, we generally take the

view that it is ‘inappropriate’ to pursue that theory in our opinions.”) (internal citation and quotation marks omitted) (Tymkovich, C.J., dissenting).

That would seem to be the end of the inquiry, but we recognize that one of our sister circuits has held that *Chevron* cannot be waived. *Guedes*, 920 F.3d at 21–23; *see also Gun Owners of America*, 19 F.4th at 899 n.5 (White, J., in support of affirmance). To be sure, we have never held in a published case that *Chevron* must be raised by the Government in order to apply. *See Albanil v. Coast 2 Coast, Inc.*, 444 F. App’x 788, 796 (5th Cir. 2011). But the conclusion is obvious, and flows from well-settled waiver principles. After all, that a court should defer to the Government’s expressed interpretation is just a legal argument, and a party waives a legal argument if it fails to raise the argument when presented with the opportunity. *See, e.g., Sindhi v. Raina*, 905 F.3d 327, 334 (5th Cir. 2018); *Fruge v. Amerisure Mut. Ins. Co.*, 663 F.3d 743, 747 (5th Cir. 2011).

As explained in the Tenth Circuit’s consideration of the Final Rule, “We refuse to consider arguments a party fails to make because we ‘depend on the adversarial process to test the issues for our decision’ and are concerned ‘for the affected parties to whom we traditionally extend notice and an opportunity to be heard on issues that affect them.’” *Aposhian*, 989 F.3d at 897 (Tymkovich, C.J., dissenting) (quoting *Hydro Resources, Inc. v. EPA*, 608 F.3d 1131, 1146 n.10 (10th Cir. 2010) (en banc)); *see also Carducci v. Regan*, 714 F.2d 171, 177 (D.C. Cir. 1983) (Scalia, J.) (“The premise of our adversarial system is that appellate courts do not sit as self-directed boards of legal inquiry and research, but essentially as arbiters of legal questions presented and argued by the parties before them.”). We must not defer to the Government’s interpretation here for the simple reason that no party argues that we should.

If ordinary waiver principles were not enough, we note also that it would contradict *Chevron*'s central justification to defer to the Government's interpretation without its urging us to do so. The justification is that "'policy choices' should be left to executive branch officials 'directly accountable to the people.'" *Guedes*, 140 S. Ct. at 790 (Gorsuch, J., statement respecting denial of certiorari) (quoting *Epic Systems v. Lewis*, 138 S. Ct. 1612, 1630 (2018) and *Chevron*, 467 U.S. at 865)). Here, the Government made a clear policy choice by declining to seek *Chevron* deference. The very interest underlying *Chevron* demands that we respect the Government's choice and interpret the statute according to traditional principles of statutory interpretation. *See Aposhian*, 989 F.3d at 898 ("If the agency disavows any reliance on *Chevron*, who are we to second-guess it?") (Tymkovich, C.J., dissenting); *Guedes*, 140 S. Ct. at 790 (Gorsuch, J., statement respecting denial of certiorari) ("[C]ourts must equally respect the Executive's decision *not* to make policy choices in the interpretation of Congress's handiwork.").

Raising the issue *sua sponte*, the D.C. Circuit assumed that the Government's actions were consistent with waiver, but held that *Chevron* cannot be waived. As an initial matter, that conclusion is likely inconsistent with Supreme Court precedent. Our highest Court "has often declined to apply *Chevron* deference when the government fails to invoke it." *Guedes*, 140 S. Ct. at 790 (Gorsuch, J., statement respecting denial of certiorari) (collecting cases); *see, e.g., HollyFrontier Cheyenne Refining, LLC v. Renewable Fuels Ass'n*, 141 S. Ct. 2172, 2180 (2021) ("[T]he government is not invoking *Chevron*. We therefore decline to consider whether any deference might be due its regulation.") (quotation omitted).

The argument against waiver is based on the premise that *Chevron* is a standard of review. *Guedes*, 920 F.3d at 163; *see also Gun Owners of America*, 992 F.3d at 477–78, *vacated*, 2 F.4th 576. It is certainly true that parties in litigation cannot waive the applicable standard of review. *E.g., United States*

v. Escobar, 866 F.3d 333, 339 n.13 (5th Cir. 2017) (quotation omitted). But *Chevron* is not a standard of review. The APA specifically sets forth standards by which courts must review agency actions—arbitrary and capricious, abuse of discretion, in excess of statutory authority, and so on. *See* 5 U.S.C. § 706. *Chevron* is merely a legal argument that the Government can make to contend that its interpretation satisfies the relevant standard of review.¹⁰

B

The *Chevron* framework does not apply for a second, independent reason: the statute which the Final Rule interprets imposes criminal penalties. As noted above, the primary reason for *Chevron* is that it allows the executive branch to make policy decisions through the accrued expertise of administrative agencies. But in exchange, *Chevron* deference shifts the responsibility for lawmaking from the Congress to the Executive, at least in part. That tradeoff cannot be justified for criminal statutes, in which the public’s entitlement to clarity in the law is at its highest. *See Guedes*, 140 S. Ct. at 790 (Gorsuch, J., statement respecting denial of writ of certiorari) (“Before courts may send people to prison, we owe them an independent determination that the law actually forbids their conduct.”); *Esquivel-Quintana v.*

¹⁰ The Tenth Circuit has also held that a plaintiff’s invocation of *Chevron*—even if made for the purpose of disputing the Government’s interpretation of a statute, and absent argument from the Government that *Chevron* should apply—is sufficient to require a court to apply the framework. *Aposhian*, 958 F.3d at 981–82. We respectfully disagree with that conclusion. *Chevron*’s purpose is to recognize the institutional competence of executive agencies and to defer to their expertise where appropriate. It would be inconsistent with that purpose to apply *Chevron* over the Government’s objection just because a plaintiff preemptively addresses the framework in an attempt to defend against the Government’s sponsored interpretation. *See Aposhian*, 989 F.3d at 896 (Tymkovich, C.J., dissenting) (“This theory of waiver is untenable. Under the panel majority’s theory, a party that challenges an agency’s interpretation of a rule is forced to dance around *Chevron*, even where the government has not invoked it. *Chevron* becomes the Lord Voldemort of administrative law, ‘the-case-which-must-not-be-named.’”).

Lynch, 810 F.3d 1019, 1027 (6th Cir. 2016) (Sutton, J., concurring in part and dissenting in part) (Applying *Chevron* to criminal statutes would “permit the aggregation” of executive and legislative power “in the one area where its division matters most: the removal of citizens from society.”).

No precedent compels *Chevron*’s application here. To the contrary, the Supreme Court has “never held that the Government’s reading of a criminal statute is entitled to any deference.” *United States v. Apel*, 571 U.S. 359, 369 (2014); *see also Gutierrez-Brizuela v. Lynch*, 834 F.3d 1142, 1155 (10th Cir. 2016) (“The Supreme Court has expressly instructed us *not* to apply *Chevron* deference when an agency seeks to interpret a criminal statute.”) (Gorsuch, J., concurring). That is so because “criminal laws are for the courts, not for the Government, to construe.” *Abramski v. United States*, 573 U.S. 169, 191 (2014). For this reason, when “the Government interprets a criminal statute too broadly . . . or too narrowly . . . a court has an obligation to correct its error.” *Id.* We must not apply *Chevron* where, as here, the Government seeks to define the scope of activities that subject the public to criminal penalties. This is precisely the position we have taken before, in an unpublished decision. *United States v. Garcia*, 707 F. App’x 231, 234 (5th Cir. 2017) (“The Supreme Court has now resolved this uncertainty, instructing that no deference is owed to agency interpretations of criminal statutes.”).

Several of our sister circuits disagree, however. *See Guedes*, 920 F.3d at 163–67; *Aposhian*, 958 F.3d at 982–84. The disagreement stems from one paragraph in the decision *Babbitt v. Sweet Home Chapter of Communities for a Great Oregon*, 515 U.S. 687 (1995). There, the Supreme Court considered a Department of the Interior regulation that interpreted the Endangered Species Act’s criminal prohibition on “taking” an endangered species as including modification of the species’s habitat. The Court did not conduct a *Chevron* analysis, but upheld the regulation, concluding that it “owe[d] some degree of deference [to] the [DOI’s] reasonable interpretation,” in part because

of the “latitude the ESA gives to [DOI] in enforcing the statute.” *Id.* at 703. It also declined to apply the rule of lenity, reasoning that an administrative regulation does not necessarily invoke the rule just because “the governing statute authorizes criminal enforcement.” *Id.* at 704 n.18.

Several courts cite *Babbitt* for the proposition that the *Chevron* framework applies with equal force to criminal regulations and displaces the rule of lenity, but it does not support that conclusion. “While *Babbitt* certainly cited *Chevron* and used the word deference with regard to the DOI’s interpretation, *Babbitt* did not discuss or decide whether *Chevron* applied nor did it analyze the challenge using *Chevron*, just as it did not decide whether the rule of lenity applied or analyze the challenge using the rule of lenity.” *Gun Owners of America*, 992 F.3d at 457, *vacated*, 2 F.4th 576. As explained by two members of the Supreme Court, *Babbitt* did not purport to set forth a general rule respecting the interpretation of criminal regulations: “The best that one can say . . . is that in *Babbitt*[] [the Court] deferred, with scarcely any explanation, to an agency’s interpretation of a law that carried criminal penalties. . . . *Babbitt*’s drive-by ruling, in short, deserves little weight.” *Whitman v. United States*, 574 U.S. 1003, 135 S. Ct. 352, 353 (Scalia, J., joined by Thomas, J., respecting the denial of certiorari).

This is confirmed by subsequent Supreme Court precedent, addressing the rule of lenity in relation to *Chevron* and declining to defer to agency interpretations of criminal statutes. *See Aposhian*, 989 F.3d at 901 (Tymkovich, C.J., dissenting) (collecting cases). *Babbitt* does not require us to apply *Chevron* in these circumstances. Indeed, most proximate sources suggest otherwise. *See Guedes*, 140 S. Ct. at 790 (Gorsuch, J., statement respecting denial of certiorari) (“[W]hatever else one thinks about *Chevron*, it has no role to play when liberty is at stake.”). As such, *Chevron* does not apply here because the statutory language at issue implicates criminal penalties.

C

Finally, we note a third reason why *Chevron* deference does not apply in these circumstances: that ATF has adopted an interpretive position that is inconsistent with its prior position. To apply *Chevron* here would contravene one of the rule’s central purposes: “to promote fair notice to those subject to criminal laws.” *United States v. Kozminski*, 487 U.S. 931, 952 (1988); *see also United States v. Kaluza*, 780 F.3d 647, 669 (5th Cir. 2015) (“The rule ‘vindicates the fundamental principle that no citizen should be held accountable for a violation of a statute whose commands are uncertain, or subjected to punishment that is not clearly prescribed.’”) (quoting *United States v. Santos*, 553 U.S. 507, 514 (2008) (plurality op.)).¹¹

If we were required to defer to the Government’s position, the Government could change the scope of criminal liability at any time. Indeed, that is exactly what it has done here. Until 2017, the ATF had never classified non-mechanical bump stocks as machineguns. But now the interpretation is reversed, and the Government would criminalize behavior that it long recognized was lawful. In considering one of the other cases involving the regulation, one member of the Supreme Court explained the problem as such:

Chevron’s application in this case may be doubtful for other reasons too. The agency used to tell everyone that bump stocks don’t qualify as ‘machineguns.’ Now it says the opposite. The law hasn’t changed, only an agency’s interpretation of it. How, in all this, can ordinary citizens be expected to keep up? . . . And why should courts, charged with the independent and

¹¹ These fair-notice issues accentuate why *Babbitt* does not bar us from applying the rule of lenity. In *Babbitt*, the Supreme Court expressly contemplated cases where it would be appropriate to apply the rule of lenity. 515 U.S. at 704 n.18 (“Even if there exist regulations whose interpretations of statutory criminal penalties provide such inadequate notice of potential liability as to offend the rule of lenity, the [regulation at issue here] cannot be one of them.”).

neutral interpretation of the laws Congress has enacted, defer to such bureaucratic pirouetting?

Guedes, 140 S. Ct. at 790 (Gorsuch, J., statement respecting denial of certiorari); *see also Aposhian*, 989 F.3d at 900 (“When an agency plays pinball with a statute’s interpretation, as the ATF has here, fair notice cannot be said to exist.”) (Tymkovich, C.J., dissenting); *Guedes*, 920 F.3d at 181 (“The ATF’s interpretation of ‘machinegun’ gives anything but fair warning—instead, it does a *volte-face* of its almost eleven years’ treatment of a non-mechanical bump stock as not constituting a ‘machinegun.’”) (Henderson, J., concurring in part and dissenting in part).¹²

The concern respecting the consistency of agency regulations is nothing new. Indeed, the Supreme Court has long recognized that an agency interpretation that “conflicts with the agency’s earlier interpretation is entitled to considerably less deference than a consistently held agency view.” *INS v. Cardoza-Fonseca*, 480 U.S. 421, 446 n.30 (1987) (internal quotations omitted); *see also Cargill*, 502 F. Supp. 3d at 1189 (quoting *Cardoza-Fonseca*). The concern is only magnified where, as here, the Government’s interpretation of the underlying statute carries implications for criminal liability. As such, *Chevron* does not apply because the Government has construed the same statute in two, inconsistent ways at different points in time.

V

Turning to the rule of lenity, and assuming *arguendo* that the relevant statute is ambiguous, we now consider whether that “ambiguity concerning the ambit of criminal statutes should be resolved in favor of lenity.” *Rewis v.*

¹² *See also* Thomas Z. Horton, *Lenity Before Kisor: Due Process, Agency Deference, and the Interpretation of Ambiguous Penal Regulations*, 54 Colum. J.L. & Soc. Probs. 629, 647–49 (2021).

United States, 401 U.S. 808, 812 (1971) (citation omitted). We conclude that the rule of lenity applies if the statute is ambiguous.

We recognize that courts have considered two standards for whether a statute is sufficiently ambiguous to trigger the rule of lenity. One standard asks whether there is a “reasonable doubt” as to the statute’s meaning. *See Reading Law* at 299 (quoting *Moskal v. United States*, 498 U.S. 103, 108 (1990)). The other inquires whether there is a “grievous ambiguity” in the statute. *See, e.g., Chapman v. United States*, 500 U.S. 453, 463 (1991) (quoting *Huddleston v. United States*, 415 U.S. 814, 831 (1974)). The Supreme Court does not appear to have decided which of these standards governs the rule of lenity. *See Wooden v. United States*, 142 S. Ct. 1063, 1075 (2022) (Kavanaugh, J., concurring) (arguing in favor of the grievous-ambiguity standard); *id.* at 142 S. Ct. at 1084 (Gorsuch, J., concurring in the judgment) (arguing in favor of the reasonable-doubt standard).

But it does not matter which standard applies because the rule of lenity applies even under the more stringent “grievously ambiguous” condition. One formulation of that standard provides that lenity applies if a court cannot discern the statute’s meaning even “after seizing everything from which aid can be derived.” *Wooden*, 142 S. Ct. at 1075 (Kavanaugh, J., concurring) (quoting *Ocasio v. United States*, 578 U.S. 282, 295 n.8 (2016)). Assuming that the statute at issue here is ambiguous, we can only “guess” at its definitive meaning. *Suchowolski*, 838 F.3d at 534. We have availed ourselves of all traditional tools of statutory construction, and in this circumstance, they fail to provide meaningful guidance. That is sufficient to require application of the rule of lenity irrespective of whether the reasonable doubt or grievous ambiguity standard applies.

The dissenting opinion objects to our application of lenity, arguing that we fail to explain why the statute at issue here is grievously ambiguous.

With this understanding, it concludes that our holding implies that “ambiguous statutes are always grievously ambiguous.” *Post* at 57. This criticism misunderstands our holding. We do not conclude that all ambiguous statutes are grievously ambiguous—only that this one is.

Our conclusion fits comfortably into the dissenting opinion’s own conceptualization of the grievous-ambiguity standard. At the very least, lenity is appropriate, the dissenting opinion concedes, if after “having tried to make sense of a statute using every other tool, we face an unbreakable tie between different interpretations.” *Post* at 56. That is the case here in two respects. First, the parties argue whether “a single function of the trigger” refers to the firearm’s mechanics or to the shooter’s pulling of the trigger. Second, the parties argue if the process of engaging the trigger and maintaining forward pressure on the gun’s forebody produces “automatic” fire.

True, the precise meaning of “grievously ambiguous” is not entirely clear. *See Shular v. United States*, 140 S. Ct. 779, 788 (2020) (Kavanaugh, J., concurring) (noting that “the Court has not always been perfectly consistent in its formulations [of grievous ambiguity]”); *Reading Law* at 299 (arguing that the term grievous ambiguity “provides little more than atmospheric, since it leaves open the crucial question—almost invariably present—of how much ambiguousness constitutes an ambiguity”) (quoting *United States v. Hansen*, 772 F.2d 940, 948 (D.C. Cir. 1985)). But having utilized all available tools of statutory interpretation, and assuming *arguendo* that those two provisions are indeed ambiguous, we are unable to resolve either of the ties. *See Alkazahg*, 81 M.J. at 784 (expressing “genuine confusion as to what the statute means”). That is sufficient to conclude that this statute—and for purposes of this case, only this statute—is grievously ambiguous.

The dissenting opinion also objects that applying lenity in this case wrongfully takes Congress’s prerogative to establish federal crimes and

transfers that power to the Judiciary, violating the separation of powers. But this is really just a repetition of the dissenting opinion’s disagreement regarding the correct interpretation of the statute at issue here. As we understand it, the National Firearms Act and Gun Control Act do not unambiguously criminalize the possession of a non-mechanical bump stock. To apply lenity in this case *preserves* the separation of powers “by maintaining the legislature as the creator of crimes.” *Esquivel-Quintana*, 810 F.3d at 1019. If ATF could change the scope of criminal liability by issuing a regulation—free from the taxing obligations of bicameralism and presentment—the Executive could wield power that our Constitution reserves to the Legislature.

The rule of lenity also prevents the possibility whereby Congress passes an ambiguous criminal statute, only to be interpreted later by a federal agency. *See id.* (“By applying lenity in this setting, last of all, courts would avoid *incentivizing* Congress to enact hybrid statutes that duck under lenity’s imperatives, to say nothing of other imperatives in construing criminal laws.”). To be sure, it would be inconsistent with our constitutional structure to apply lenity in an unprincipled manner to statutes that are not really ambiguous. But here, we are wholly persuaded that if the definition of “machinegun” does not unambiguously exclude non-mechanical bump stocks, its inclusion of the latter is at the very least ambiguous. Given that conclusion, our separation of powers is aided, rather than impeded, by applying the rule of lenity.

The rule of lenity is a “time-honored interpretive guideline.” *Liparota v. United States*, 471 U.S. 419, 429 (1985). We have applied it many times to construe ambiguous statutes against imposing criminal liability. *See e.g., United States v. Cooper*, 38 F.4th 428, 434 (5th Cir. 2022); *Kaluza*, 780 F.3d at 669; *United State v. Orellano*, 405 F.3d 360, 370 (5th Cir. 2005). This case is no different: assuming the definition of machinegun is ambiguous, we are bound to apply the rule of lenity. That is, we are bound to construe the

definition of machinegun to exclude a semi-automatic weapon equipped with a non-mechanical bump stock. *See Alkazahg*, 81 M.J. at 784 (“We decline to step into the role of the legislature when the legislature has not been clear about whether Appellant’s conduct was criminal. Judge Henry Friendly described the rule of lenity as ‘the instinctive distaste against men languishing in prison unless the lawmaker has clearly said they should.’ Here, we express that distaste.”) (quoting *United States v. Bass*, 404 U.S. 336, 348 (1971)). Therefore, assuming *arguendo* that the statute is ambiguous, we conclude that the rule of lenity demands that we resolve that ambiguity in favor of Car-gill, and in turn conclude that a non-mechanical bump stock is not a ma-chinegun for purposes of the National Firearms Act and Gun Control Act.

VI

Cargill also argues that the passage of the Final Rule is an exercise of legislative power, in violation of the Constitution’s vesting all such power in Congress. U.S. Const. art. I, § 1. Some have expressed serious concern at the ATF’s lack of explicit authorization to interpret criminal statutes as such.

[W]e should feel deep discomfort at allowing an agency to de-fine the very criminal rules it will enforce by implicit delega-tion. Such a delegation “turn[s] the normal construction of criminal statutes upside down, replacing the doctrine of lenity with a doctrine of severity.” *Carter v. Welles-Bowen Realty, Inc.*, 736 F.3d 722, 730 (6th Cir. 2013) (Sutton, J., concurring). The delegation raises serious constitutional concerns by making ATF the expositor, executor, *and* interpreter of criminal laws.

Aposhian, 989 F.3d at 900 (Tymkovich, C.J., dissenting).

We acknowledge this concern, especially in light of statements made by several members the Supreme Court calling into question the relevant standards for legislative-power-delegation issues. *See Gundy v. United States*, 139 S. Ct. 2116, 2131–42 (2019) (Gorsuch, J., dissenting, joined by Roberts,

C.J., and Thomas, J.); *id.* at 2130–31 (Alito, J., concurring in the judgment); *Paul v. United States*, 140 S. Ct. 342 (2019) (Kavanaugh, J., statement respecting the denial of certiorari).

We need not decide this question because multiple independent reasons compel us to hold the Final Rule to be unlawful. But if more were needed, this issue may well implicate the canon of constitutional avoidance. Under that well-established doctrine, “where an otherwise acceptable construction of a statute would raise serious constitutional problems, the Court will construe the statute to avoid such problems unless such construction is plainly contrary to the intent of Congress.” *Hersh v. United States*, 553 F.3d 743, 754–55 (5th Cir. 2008) (quoting *Edward J. DeBartolo Corp. v. Florida Gulf Coast Building & Constr. Trades Council*, 485 U.S. 568, 575 (1988)); *see also Reading Law* at 250.

For many jurists, the question of Congress’s delegating legislative power to the Executive in the context of criminal statutes raises serious constitutional concerns. *See Guedes*, 140 S. Ct. at 790 (Gorsuch, J., statement respecting denial of certiorari); *Aposhian*, 989 F.3d at 900 (Tymkovich, C.J., dissenting); *Esquivel-Quintana*, 810 F.3d at 1027 (Sutton, J., concurring in part and dissenting in part). We do not reach this issue because we do not have to. But if we did, it would only provide more support for the conclusion that a semi-automatic rifle equipped with a non-mechanical bump stock is not a machinegun for purposes of federal law.

VII

Having determined that the judgment of the district court must be reversed, we remand this case to the district court to enter judgment for Cargill and to determine the proper scope of relief. It is well-established that “[a] plaintiff’s remedy must be tailored to redress the plaintiff’s particular injury.” *Gill v. Whitford*, 138 S. Ct. 1916, 1934 (2018). And as an initial matter,

vacatur of an agency action is the default rule in this Circuit. *See, e.g., Data Mktg. Partnership, LP v. United States Dept. of Labor*, 45 F.4th 846, 859 (5th Cir. 2022) (“The default rule is that vacatur is the appropriate remedy.”); *see also Franciscan Alliance, Inc. v. Becerra*, 47 F.4th 368, 374–75 (5th Cir. 2022) (“Vacatur is the only statutorily prescribed remedy for a successful APA challenge to a regulation.”). But the parties have not briefed the remedial-scope question, and it may be the case that a more limited remedy is appropriate in these circumstances. We express no opinion on that question other than to observe that the district court is well-placed to answer the question in the first instance. We therefore remand this case to the district court with the instruction that it enter judgment for Cargill and determine what remedy—injunctive, declarative, or otherwise—is appropriate to effectuate that judgment.

VIII

Many commentators argue that non-mechanical bump stocks contribute to firearm deaths and that the Final Rule is good public policy. We express no opinion on those arguments because it is not our job to determine our nation’s public policy. That solemn responsibility lies with the Congress, and our task is confined to deciding cases and controversies, which requires us to apply the law as Congress has written it.¹³

In defining the term machinegun, Congress referred to the mechanism by which the gun’s trigger causes bullets to be fired. Policy judgments aside,

¹³ The dissenting opinion accuses us of using the rule of lenity to “legalize an instrument of mass murder.” *Post* at 61. But it is Congress’s responsibility to unambiguously define the scope of criminal conduct. Congress having failed to do so, we deploy lenity to retain the proper allocation of legislative power, not unsettle it. And the dissenting opinion’s resort to policy argument only underscores the Judiciary’s proper role. It is our responsibility to apply the law as written, regardless of what we think about the law’s wisdom or utility.

we are bound to apply that mechanical definition. And applying that definition to a semi-automatic rifle equipped with a non-mechanical bump stock, we conclude that such a weapon is not a machinegun for purposes of the Gun Control Act and National Firearms Act. *Chevron* deference likely has no role here either because the Government waived it or because it does not apply to the Government's interpretation of a statute imposing criminal penalties. Finally, even if the statute were ambiguous—which it is not—the rule of lenity would require that we interpret the statute in Cargill's favor. As Justice Holmes framed it years ago, “it is reasonable that a fair warning should be given to the world in language that the common world will understand, of what the law intends to do if a certain line is passed.” *McBoyle*, 283 U.S. at 27. We cannot say that the National Firearms Act and Gun Control Act give that fair warning that possession of a non-mechanical bump stock is a crime.

The Final Rule promulgated by the ATF violates the APA. We therefore REVERSE the judgment of the district court and REMAND with instructions to enter judgment for Cargill.

HAYNES, *Circuit Judge*, joined by RICHMAN, *Chief Judge*, concurring in the judgment:

I concur in the judgment only because I reluctantly conclude that the relevant statute is ambiguous such that the rule of lenity favors the citizen in this case.

JAMES C. HO, *Circuit Judge*, joined by RICHMAN, *Chief Judge*, and SOUTHWICK, *Circuit Judge*, concurring in part and concurring in the judgment:

Under the rule of lenity, “[p]enal statutes must be construed strictly.” 1 WILLIAM BLACKSTONE, COMMENTARIES *88. “This is a rule of construction . . . as old and well established as law itself.” *United States v. Wilson*, 28 F. Cas. 699, 709 (C.C.E.D. Pa. 1830).

Our courts have thus long recognized that “all reasonable doubts concerning [the] meaning [of a penal statute] . . . operate in favor of [the defendant].” *Harrison v. Vose*, 50 U.S. 372, 378 (1850). We apply the rule of lenity where “reasonable doubt persists about a [criminal] statute’s intended scope.” *Moskal v. United States*, 498 U.S. 103, 108 (1990). When standard principles of statutory interpretation “fail to establish that the Government’s position is unambiguously correct . . . [we] resolve the ambiguity in [the defendant’s] favor.” *United States v. Granderson*, 511 U.S. 39, 54 (1994).

The rule of lenity rests on “the principle that the power of punishment is vested in the legislative, not in the judicial department.” *United States v. Wiltberger*, 18 U.S. 76, 85 (1820) (Marshall, C.J.). The rule also ensures fair notice to citizens: “To make the warning fair, . . . the line should be clear.” *McBoyle v. United States*, 283 U.S. 25, 27 (1931) (Holmes, J.).

In sum, it is not enough to conclude that a criminal statute *should* cover a particular act. The statute must *clearly* and *unambiguously* cover the act.

Consider the disturbing problem of designer drugs. The Controlled Substances Act of 1970 prohibits drugs listed on certain schedules. *See Thor v. United States*, 554 F.2d 759, 762–63 (5th Cir. 1977). In response, a line of synthetically produced drugs was created “to mimic the pharmacological effects” of scheduled drugs, while evading the Act. Clayton L. Smith, *The*

Controlled Substance Analogue Enforcement Act of 1986: The Compromising of Criminalization, 16 AM. J. CRIM. L. 107, 108 (1988).

Designer drugs differed in chemical composition from scheduled drugs. But they were just as lethal. So the same policy justifications for banning scheduled drugs readily applied to designer drugs.

Yet all three branches agreed that existing law did not ban designer drugs. *See, e.g., Controlled Substance Analogs Enforcement Act of 1985: Hearing on S. 1437 Before the S. Comm. on the Judiciary*, 99th Cong. 1st Sess. 2 (1985) (opening statement of Chairman Strom Thurmond) (“[U]nlawful activity under the Controlled Substances Act is defined with regard to the precise chemical makeup of the substances described by schedules Make a minor alteration in the molecular structure of an outlawed drug . . . and you have produced a . . . dangerous narcotic that is not illegal.”); *id.* at 41–42 (statement of Stephen S. Trott, Assistant Attorney General, Criminal Division, Department of Justice) (“[I]f a particular substance is not included in one of the schedules, it is not unlawful to manufacture or to distribute it . . . despite the potential for abuse”); *United States v. Gavrilovic*, 551 F.2d 1099, 1106 (8th Cir. 1977) (reversing a conviction where a concededly dangerous narcotic had not been properly added to a schedule).

So a new act of Congress was required to get at the problem of designer drugs. And that’s why Congress enacted the Controlled Substance Analogue Enforcement Act of 1986. Pub. L. No. 99-570, §§ 1201–04, 100 Stat. 3207, 3207–13 to 3207–14 (1986). *See also United States v. Muhammad*, 14 F.4th 352, 355 (5th Cir. 2021) (“[T]he Analogue Act is an antidote to statutory evasion: It expands the CSA’s coverage to include substances that, while *technically* not on the schedules, mimic those that are.”).

Bump stocks present the same basic conundrum as designer drugs. Federal law criminalizes the possession of fully automatic machineguns. *See*

18 U.S.C. § 922(o)(1) (machinegun ban); 26 U.S.C. § 5845(b) (machinegun definition). That prohibition does not apply to semiautomatic weapons. *See* Gun Control Act of 1968, § 201, 82 Stat. 1231 (codified at 26 U.S.C. § 5845(b)) (amending the 1934 federal definition of “machinegun” to omit weapons that shoot “semiautomatically”).

But bump stocks now allow semiautomatic weapons to mimic automatic machineguns. By attaching a bump stock to a semiautomatic firearm, the shooter can simulate the experience of firing an automatic machinegun. *See* 83 Fed. Reg. 66,515–16.

Just as designer drugs achieve the same lethality as scheduled drugs, bump stocks allow semiautomatic weapons to achieve the same lethality as fully automatic machineguns. But once again, Congress must take action if it wishes to criminalize bump stocks, just as it did during the 1980s when it came to designer drugs.

That’s because federal law defines “machinegun” as a weapon that shoots more than one shot “automatically . . . by a single function of the trigger.” 26 U.S.C. § 5845(b). There are competing theories as to whether this language is best construed to cover bump stocks. In my own view, the relevant language is at best ambiguous. That makes this an easy case for invoking the rule of lenity. Accordingly, I agree that we should reverse.

I.

Federal law defines a machinegun as a “weapon which shoots . . . automatically more than one shot . . . by a single function of the trigger.” 26 U.S.C. § 5845(b). The definition also includes “any part designed and intended . . . for use in converting a weapon into a machinegun.” *Id.* Violators of the machinegun ban risk up to ten years in federal prison. 18 U.S.C. § 924(a)(2).

I see at least two challenges with reading § 5845(b) to cover bump stocks. To begin with, it's at best ambiguous whether a semiautomatic weapon equipped with a bump stock is indeed capable of shooting more than one shot by "a single function of the trigger." *Id.* And even if I could get past that problem, it's also ambiguous at best whether the weapon does so "automatically." *Id.* So the rule of lenity requires us to reverse.

A.

The phrase "single function of the trigger" is not a matter of common parlance. No one has identified an example of this phrase ever being used in any context other than this statute.

So it's a term that requires interpretation. And in this context, the interpretive steps it takes to get from "single function of the trigger" to the criminalization of bump stocks fall short of the fair notice that lenity requires.

What does "single function of the trigger" mean? "[F]unction" means "action." WEBSTER'S NEW INTERNATIONAL DICTIONARY 1019 (2nd ed. 1934). But where does that leave us?

If it means that there is a single action on the trigger from the *shooter's* perspective, then this language might very well apply to bump stocks. That's because a single action on the trigger by the shooter is enough to spray multiple bullets.

But if the phrase means that there is a single action by the trigger from the *weapon's* perspective, then this language would *not* apply to bump stocks. That's because from the weapon's perspective, a single action by the trigger releases just one bullet. *See, e.g., Gun Owners of Am., Inc. v. Garland*, 992 F.3d 446, 469 (6th Cir. 2021) ("the question is whether 'function' is referring to the mechanical process (i.e., the act of the trigger's being depressed, released, and reset) or the human process (i.e., the shooter's

pulling, or otherwise acting upon, the trigger)”), *vacated on reh’g en banc*, 2 F.4th 576 (6th Cir. 2021).

I conclude that grammar and syntax are at best inconclusive, and that lenity therefore requires us to side with the citizen over the government.

The problem here is the distinction between what classical grammarians call the “subjective genitive” and the “objective genitive.” See, e.g., LAUREL J. BRINTON, *THE STRUCTURE OF MODERN ENGLISH: A LINGUISTIC INTRODUCTION* 108 (2000) (“The phrase *the shooting of the hunters* is ambiguous between subjective and objective genitive readings because it can mean either ‘the hunters shoot X’ or ‘X shoots the hunters.’”); see also THOMAS KERCHEVER ARNOLD, *AN ENGLISH GRAMMAR FOR CLASSICAL SCHOOLS* 98 (1848); SIDNEY GREENBAUM & RANDOLPH QUIRK, *A STUDENT’S GRAMMAR OF THE ENGLISH LANGUAGE* 103 (1990).

Take, for example, the phrase “the love of my children.” That phrase could mean that my children love me (in other words, my children are the *subject* of love). Or it could mean that I love my children (so my children are the *object* of love).

Only context can clarify whether children are the subject or the object of love. Compare EMMA D.E.N. SOUTHWORTH, *VICTOR’S TRIUMPH* 97 (1874) (“[S]he could not win the love of children.”) (subjective genitive), with Henry James, *Stephen Dewhurst’s Autobiography* 54 *THE ATLANTIC MONTHLY* 649, 650 (1884) (“[S]he had a most vivacious love of children.”) (objective genitive).

Consider another example: “the fear of the soldiers.” Without clarifying context, this could mean that the soldiers are fearful (the soldiers are the subject of fear). Or it could mean that someone else is fearful of the soldiers (the soldiers are the object of fear). Compare Jan Palmper *Fear:*

Soldiers and Emotion in Early Twentieth-Century Russian Military Psychology, 68 SLAVIC REV. 259, 270 n.38 (2009) (“[T]he fear that officers inspired in soldiers could also cause harm[] Only just, law-abiding behavior on the part of officers could keep this particular fear of soldiers in check.”) (subjective genitive), *with* C. Stanley Smith, *Five Days*, 1927 THE ATLANTIC MONTHLY 836, 841 (“The fact that I also felt absolutely no fear of the soldiers contributed largely to my safety.”) (objective genitive).

Naturally, then, this same ambiguity can also exist when a genitive construction modifies the term “function.”

For example, the phrase “function of the polls” could refer to what polls do (polls are the subject). *See* A. Stuart, Norman L. Webb & D. Butler, *Public Opinion Polls*, 142 J. ROYAL STAT. SOC’Y 443, 447 (1979) (“The second and most obvious function of polls is that they show the progress of electoral campaigns in a purely informative sense.”) (subjective genitive).

Or it could refer to what voters do at the polls (polls are the object). *See* H.W. Warner, *The Republic: Things as They Are at Present, Compared with the Past*, 4 AM. REV. 278, 279 (1849) (early American lawmakers established age, residency, and property requirements as “necessary qualifications for the function of the polls”) (objective genitive).

By the same token, a “function of the trigger” could mean what the trigger does (the trigger is the subject). Or it could mean what the shooter does to the trigger (the trigger is the object). A “single function of the trigger” could mean that the trigger acts once—or that the shooter acts once on the trigger.

The government’s reading prevails if it’s clear that the trigger is the object, and the shooter is the implied subject. But there’s nothing inherent about the phrase “function of the trigger” that tells us that the trigger is the object rather than the subject.

So grammar alone can't dictate whether we should read the statute from the machine's perspective (subjective genitive) or the shooter's perspective (objective genitive). As the D.C. Circuit explained: "[T]he text is silent on the crucial question of which perspective is relevant. A mechanical perspective . . . might focus on the trigger's release of the hammer, which causes the release of a round. From that perspective, a 'single function of the trigger' yields a single round of fire when a bump-stock device moves the trigger back and forth. By contrast, from the perspective of the shooter's action, the function of pulling the trigger a single time results in repeated shots when a bump-stock device is engaged. From that perspective, then, a 'single function of the trigger' yields multiple rounds of fire." *Guedes v. Bureau of Alcohol, Tobacco, Firearms & Explosives*, 920 F.3d 1, 29 (D.C. Cir. 2019).

In the examples provided above, the history or context of a particular phrase sheds light on whether it contains a subjective or objective genitive. Take another example: "The fear of the Lord is the beginning of wisdom." PSALM 111:10. Construed as a subjective genitive, "the fear of the lord" could refer to an anxious aristocrat, afraid of an overweening monarch or unruly populace. But we know that the Bible means something very different—that the wise man fears God.

Unlike "fear of the Lord," a "single function of the trigger" does not offer much by way of history or context. No example of its usage in any other context has been provided by anyone in this litigation. Congress appears to have coined the phrase just for this statute.¹

¹The plurality claims that its interpretation is supported by context: A neighboring provision, § 5845(c), refers to a "single *pull* of the trigger"—whereas § 5845(b) uses the phrase "single *function* of the trigger." *See ante*, at 20–21. So the plurality infers that the

As between construing “single function of the trigger” from the weapon’s perspective or the shooter’s perspective, then, the statute appears to be in equipoise. And statutory equipoise is a textbook case for lenity.²

term “pull” must be distinct from the term “function”—if “pull” signifies the shooter’s perspective, then “function” must signify the weapon’s perspective. *Cf. Gun Owners*, 992 F.3d at 469 (“pull” suggests “shooter’s” perspective); *Guedes*, 920 F.3d at 29 (same).

But the dissent would presumably counter with legislative history suggesting that the terms are interchangeable rather than distinct. *See Cargill v. Garland*, 20 F.4th 1004, 1010 (5th Cir. 2021), *reh’g granted*, 37 F.4th 1091 (5th Cir. 2022) (quoting House report statement that the statute defines machinegun as “a weapon designed to shoot more than one shot without reloading and by a single pull of the trigger”); *id.* (statement of Karl T. Frederick, President, National Rifle Association of America) (equating “single pull of the trigger” with “single function of the trigger”). And whatever one may think of legislative history, the Supreme Court has repeatedly looked to it before invoking lenity. *See, e.g., Moskal*, 498 U.S. at 108; *Granderson*, 511 U.S. at 54.

So there’s some evidence that the terms are distinct, and some that the terms are interchangeable. The evidence thus appears to be in equipoise—a classic case for lenity.

² Both the plurality and the dissent resist the notion of equipoise. They both point to other words in § 5845(b) that arguably favor their respective positions: The plurality invokes the subject of the sentence (“machinegun”)—while the dissent relies on a prepositional phrase (“without manual reloading”).

Neither inference seems warranted. Neither the plurality nor the dissent cites a rule of grammar that says that a subject or prepositional phrase tells us whether to read a subsequent phrase as a subjective or objective genitive. And I’m aware of none.

For example, the plurality notes that, under § 5845(b), “machinegun means . . . any weapon which shoots . . . automatically more than one shot . . . by a single function of the trigger.” 26 U.S.C. § 5845(b). So “[t]he subject of the sentence . . . is machinegun.” *Ante*, at 19. Therefore, the plurality argues, it must be the perspective of the *machinegun*, not the *shooter*, that dictates how we read “function of the trigger.”

But no rule of grammar supports this inference. Suppose I offer this definition: “*Sugar* means a sweet carbohydrate that enhances the *enjoyment of food*.” Naturally, we would read “enjoyment of food” from the perspective of the *eater*, not the *food*—even though sugar is the subject of the sentence, and the sentence never mentions the eater.

The dissent commits a similar error. It claims that § 5845(b) must be read from the shooter’s perspective because it defines “machinegun” to mean a weapon that fires

B.

There's another ambiguity in the statute. Does a semiautomatic weapon equipped with a bump stock shoot multiple bullets "automatically?" Each side puts forth its competing theory with great force. But neither deals a fatal blow to the other—which is why, once again, lenity compels reversal.

Cargill argues that a bump stock doesn't shoot multiple bullets "automatically" because it requires "constant forward pressure with the non-trigger hand." *Guedes*, 920 F.3d at 44 (Henderson, J., concurring in part and dissenting in part). "Automatic" means "self-acting." OXFORD ENGLISH DICTIONARY at 574 (1933). So Cargill argues that the need for human input means that bump stocks do not shoot automatically, because they do not shoot in a self-acting fashion.

But the government counters that the term "automatic" need not necessarily mean *no* human input. It could just mean *less* human input. And that would make it ambiguous at best whether "automatic" includes or excludes bump stocks.

Consider an automatic sewing machine. With a machine that sews automatically, you don't just push a button—you also move the cloth forward with your hand.

multiple shots, "without manual reloading," by a single function of the trigger. 26 U.S.C. § 5845(b). The phrase "without manual reloading" means that no reloading is performed by the *shooter*. So the dissent theorizes that "single function of the trigger" must likewise refer to an action performed by the *shooter*. *See post*, at 57 n.5.

But once again, no rule of grammar supports such an inference. Suppose I offer this definition: "A well-trained army means an army that follows orders, *without constant reminding*, due to the *fear of the soldiers*." Naturally, "without constant reminding" means no reminding is done by *officers*, not *soldiers*. Yet the phrase "fear of the soldiers" obviously refers to a feeling felt by *soldiers*. The soldiers are afraid—not the officers.

This is similar to a bump stock. You don't just pull the trigger with your finger—you also apply pressure with your non-trigger hand. *See Guedes*, 920 F.3d at 30.

Likewise, with an automatic car—one that shifts gears automatically—you still have to “maintain[] enough constant pressure on the gas pedal to reach a speed that triggers a gear shift.” *Gun Owners of Am., Inc. v. Garland*, 19 F.4th 890, 906 (6th Cir. 2021) (en banc) (White, J., for an equally divided court).

“[T]he ultimate question,” then, “is how much human input is contemplated by the word ‘automatically.’” *Id.* But “[t]hat is a question of degree that the statute’s text does not definitively answer.” *Id.* And because there is no definitive answer, lenity compels reversal.

II.

The rule of lenity “requires ambiguous criminal laws to be interpreted in favor of the defendants subjected to them.” *United States v. Bittner*, 19 F.4th 734, 748 (5th Cir. 2021) (quoting *United States v. Santos*, 553 U.S. 507, 514 (2008) (plurality opinion)), *cert. granted*, 142 S. Ct. 2833 (2022). Lenity applies when there “remains a grievous ambiguity or uncertainty,” even after the court has examined it using the standard tools of construction. *United States v. Castleman*, 572 U.S. 157, 173 (2014).

Bump stocks may well be indistinguishable from automatic weapons for all practical purposes. But as Chief Justice Marshall recognized two centuries ago in a seminal case on the rule of lenity: “It would be dangerous . . . to punish a crime not enumerated in the statute, because it is of equal atrocity, or of kindred character, with those which are enumerated.” *Wiltberger*, 18 U.S. at 96.

Consider the facts in *Wiltberger*. A shipmaster had killed a sailor while the vessel was on a river, near its mouth. *Id.* at 77. Surely we would all agree that manslaughter is a criminal act, deserving of punishment. The Court nevertheless unanimously construed a statute that punished manslaughter on the “high seas” not to apply to an identical act on a river. *Id.* at 103–06. The Court noted that it was “extremely improbable” Congress would want to treat upstream manslaughter differently from manslaughter committed downstream, past the river’s mouth. *Id.* at 105. “But probability is not a guide which a court, in construing a penal statute, can safely take.” *Id.*³

³ The dissent says lenity applies only in cases of true equipoise—where there’s an “unbreakable tie” between competing interpretations. *Post*, at 56. *See also id.* at 58.

But equipoise is precisely what’s presented here. As explained, each side offers conflicting theories as to whether bump stocks fire multiple bullets “automatically” or “by a single function of the trigger.” But neither has the goods on the other. So lenity governs.

Moreover, the Supreme Court has long held that lenity requires us to “resolve [] ambiguity” and construe “reasonable doubt” in favor of the accused. *See Granderson*, 511 U.S. at 54; *Moskal*, 498 U.S. at 108. The dissent responds that more recent precedent invokes lenity only in cases of “grievous ambiguity.” *Post*, at 56 & n.2. But the Court has never indicated any intention to abrogate its longstanding commitment to lenity in cases of “reasonable doubt.”

And for good reason: The Court has historically “link[ed] the high burden of the rule of lenity with the high burden of proving guilt in a criminal trial beyond a reasonable doubt.” Daniel Ortner, *The Merciful Corpus: The Rule of Lenity, Ambiguity and Corpus Linguistics*, 25 B.U. PUB. INT. L.J. 101, 109 (2016).

The link between legal and factual doubt is not just longstanding—it’s logical. After all, it’s just as “grievous” to punish an accused whether there’s reasonable doubt as to fact or law. *See id.*; *see also* ANTONIN SCALIA & BRYAN A. GARNER, *READING LAW: THE INTERPRETATION OF LEGAL TEXTS* 296, 299 (2012) (lenity reflects “‘the tenderness of the law for the rights of individuals,’” *Wiltberger*, 18 U.S. at 95, and applies where a matter is “not beyond reasonable doubt,” because “the consequences should be visited on the party more able to avoid and correct the effects of shoddy legislative drafting”).

* * *

As a matter of lethality, bump stocks may well be no different from machineguns. Just as manslaughter on a river is no less deadly than manslaughter at sea. And designer drugs are no less dangerous than scheduled drugs. But as a matter of legality, Congress could not ban designer drugs without passing the Analogue Act. Nor could it punish manslaughter on a river without saying so. Likewise, Congress cannot criminalize bump stocks absent a clear and unambiguous statute.

Members of Congress who strongly oppose bump stocks nevertheless concede that “legislation is the only way to ban bump stocks.” Press Release, Sen. Dianne Feinstein, *Feinstein Statement on Regulation to Ban Bump Stocks* (Mar. 23, 2018). I agree.⁴

⁴ Thirteen of the sixteen members of our en banc court likewise agree that legislation is the “only way” to ban bump stocks. *Id.*

The dissent responds by accusing 80% of our court of “legaliz[ing] an instrument of mass murder.” *Post*, at 61. Yet the dissent does not accuse the Supreme Court of “legaliz[ing] . . . murder”—even though it applied lenity to manslaughter in *Wiltberger*. To the contrary, the dissent *relies* on *Wiltberger*. *See id.* at 58 (quoting *Wiltberger*, 18 U.S. at 95).

Odder still, the dissent also accuses us of creating a “special rule of lenity for guns,” “giving machinegun owners immunity from prosecution that is not shared by other offenders.” *Id.* at 57 n.4, 61. I have no idea what “special rule” the dissent is talking about. I’ll say it again: I would apply the exact same principle to guns as to drugs or manslaughter.

Finally, the dissent theorizes that, if we apply lenity here, “it is unclear how Congress could draft [] a [new] statute while avoiding ambiguity as to what counts as a bump stock.” *Post*, at 61. But what’s wrong with the text proposed by Senator Feinstein after the Las Vegas shooting—which makes it unlawful to possess “a bump-fire device, or any part, component, device, attachment, or accessory that is designed or functions to accelerate the rate of fire of a semiautomatic rifle but not convert the semiautomatic rifle into a machinegun”? S. 1916, 115th Cong. § 2 (2017). The dissent does not say.

STEPHEN A. HIGGINSON, *Circuit Judge*, joined by DENNIS and GRAVES, *Circuit Judges*, dissenting:

I.

For the reasons stated in the panel opinion, *Cargill v. Garland*, 20 F.4th 1004 (5th Cir. 2021), *reh'g granted*, 37 F.4th 1091 (5th Cir. 2022), I respectfully dissent from our court's decision that a bump stock is not a machinegun within the meaning of 18 U.S.C. § 921(a)(24).

II.

I write further to dissent from our court's use of lenity to rewrite this statute.

The Supreme Court has repeatedly instructed that “the rule of lenity only applies, if, after considering text, structure, history, and purpose, there remains a *grievous* ambiguity or uncertainty in the statute *such that the [c]ourt must simply guess* as to what Congress intended.” *Maracich v. Spears*, 570 U.S. 48, 76 (2013) (emphases added) (cleaned up); *see, e.g., Ocasio v. United States*, 578 U.S. 282, 295 n.8 (2016) (similar); *Roberts v. United States*, 572 U.S. 639, 646 (2014) (similar); *United States v. Hayes*, 555 U.S. 415, 429 (2009) (similar). Under this standard, the Supreme Court has been clear that we do not invoke lenity just because “multiple, divergent principles of statutory construction” are available, *Lockhart v. United States*, 577 U.S. 347, 361 (2016), “the statute’s text, taken alone, permits a narrower construction,” *Abramski v. United States*, 573 U.S. 169, 188 n.10 (2014), or “a law merely contains some ambiguity or is difficult to decipher,” *Wooden v. United States*, 142 S. Ct. 1063, 1075 (2022) (Kavanaugh, J., concurring). Rather, the Supreme Court lets us deploy lenity to narrow laws only as a last resort when,

having tried to make sense of a statute using every other tool, we face an unbreakable tie between different interpretations.¹

Contrary to this authority, the majority opinion and the lead concurrence apply the rule of lenity to garden-variety ambiguity.² In doing so, today’s ruling usurps Congress’s power to define what conduct is subject to criminal sanction and creates grave ambiguity about the scope of federal criminal law.

Under the majority’s rule, the defendant wins by default whenever the government fails to prove that a statute unambiguously criminalizes the defendant’s conduct. The majority holds that § 921(a)(24) is “unambiguous,” but claims that if the statute *were* ambiguous, it would

¹ Notwithstanding this Supreme Court precedent, there is robust scholarly debate about how much ambiguity triggers lenity. See, e.g., David S. Romantz, *Reconstructing the Rule of Lenity*, 40 CARDOZO L. REV. 523, 567 (2018) (cataloguing nine tests); Intisar S. Rabb, *The Appellate Rule of Lenity*, 131 HARV. L. REV. F. 179 (2018) (conducting empirical study of lenity cases); Shon Hopwood, *Restoring the Historical Rule of Lenity as a Canon*, 95 N.Y.U. L. REV. 918 (2020) (attacking the modern approach). This debate has crossed over to sitting Supreme Court Justices, who are free to explore whether they might change the law that binds us. Compare *Shular v. United States*, 140 S. Ct. 779, 788 (2020) (Kavanaugh, J., concurring), and *Wooden*, 142 S. Ct. at 1075 (Kavanaugh, J., concurring), with *Wooden*, 142 S. Ct. at 1084 (Gorsuch, J., concurring in the judgment) (questioning the “grievous” ambiguity standard).

² In this respect, today’s ruling departs from our many cases that follow binding Supreme Court law. See, e.g., *Gonzalez v. CoreCivic, Inc.*, 986 F.3d 536, 539 (5th Cir. 2021) (Ho, J.) (affirming that the rule of lenity “has force only where a law is grievously ambiguous, meaning that the court can make no more than a guess as to what the statute means” (cleaned up)). However, the recent trend in our circuit, culminating here, has been to lower the bar for lenity beneath the floor presently set by the Supreme Court. See, e.g., *United States v. Hamilton*, 46 F.4th 389, 397 n.2 (5th Cir. 2022) (Elrod, J.) (applying lenity to “resolve all reasonable doubts about the meaning of [the criminal statute] in [the defendant’s] favor” and asserting that lenity applies where “there is some doubt about the meaning” of the statute).

invoke the rule of lenity.³ In making this assertion, the majority assumes that the statute would necessarily be *so* ambiguous that “all traditional tools of statutory construction” would “fail to provide meaningful guidance.” Yet the majority does not explain how the tools upon which it relied to interpret the statute—dictionaries, grammar, and corpus linguistics—would be useless to resolve an interpretive debate if the statute were ambiguous. So the majority rests on an unstated and unsupported leap: ambiguous statutes are always grievously ambiguous. In effect, this means the rule of lenity would apply to decide any ambiguity in Cargill’s favor.⁴

The lead concurrence adopts an equally low threshold for lenity. Unlike the majority, the concurrence concludes that § 921(a)(24) *is* ambiguous. But instead of relying on familiar techniques to resolve the ambiguity, the concurrence merely asserts that this is “an easy case for invoking the rule of lenity.” The concurrence first invokes lenity because it cannot decide whether “single function of the trigger” means that “the trigger acts once” or “the shooter acts once on the trigger,” and so “the statute appears to be in equipoise.” This dilemma is of the concurrence’s own making. The concurrence contrives an impossible task by isolating the phrase “single function of the trigger” from the rest of the provision.⁵

³ The only other court to find that bump stocks are not machineguns made a similar mistake. *See United States v. Alkazahg*, 81 M.J. 764, 784 (N-M. Ct. Crim. App. 2021) (asserting that defendant would prevail thanks to lenity if the court’s “statutory analysis [were] incorrect and the ambiguity could not be resolved”).

⁴ The majority insists that this rule is limited to “this statute.” But by devising a special rule of lenity for guns, the majority substitutes its own policy preferences for Congress’s.

⁵ Notably, the concurrence ignores the phrase “without manual reloading,” which immediately precedes “by a single function of the trigger” and refers to the action of a shooter (implied subject) on a gun (object). *See* 26 U.S.C. § 5845(b). It does so because

Further, the concurrence refuses to explain why it could not weigh relevant evidence, including legislative history and District Judge Ezra’s inferences drawn from expert testimony at trial, *see Cargill*, 20 F.4th at 1010, 1013, to determine whether the “mechanistic” interpretation prevails.

The lead concurrence next invokes lenity because the text does not “definitive[ly] answer” the question of whether the statutory term “automatically” means “no human input,” not “less human input.” But just because both *Cargill* and the government “put[] forth [their] competing theories with great force” does not mean we are left to guess at and then invalidate what Congress intended. *Maracich*, 570 U.S. at 76 (cleaned up).

More fundamentally, our court’s new lenity regime violates separation-of-powers principles. Article I gives Congress, “not the [c]ourt,” the power to “define a crime, and ordain its punishment.” *United States v. Wiltberger*, 18 U.S. (5 Wheat.) 76, 95 (1820). As the Supreme Court has resolved, when properly limited to *grievous* ambiguity, lenity furthers this design. By breaking interpretive ties for the defendant where no other tool yields an answer, this canon keeps us from accidentally legislating crimes from the bench. But lenity is the enemy of Article I when applied to any ambiguity that might arise during statutory interpretation and that could be resolved using other interpretive tools. This is because statutory language can be ambiguous enough to bear multiple interpretations—even here, a

“no rule of grammar” would compel us to read the statute “from the shooter’s perspective.” But the grammar is clear: a shooter is the implied subject of the sentence. Even if this conclusion were not apparent from context, we do not decide what statutes mean by drawing inferences from the absence of a grammatical postulate—we use common sense. *See United States v. Castleman*, 572 U.S. 157, 183 (2014) (Scalia, J., concurring in part and concurring in the judgment); *RadLAX Gateway Hotel, LLC v. Amalgamated Bank*, 566 U.S. 639, 645 (2012) (Scalia, J.). Here, the concurrence’s reading has the strange effect of anthropomorphizing the gun and eliding the shooter from the statute.

“mechanistic” one—yet still evince intent to sanction specific conduct. *Compare Hayes*, 555 U.S. at 429 (acknowledging that a statute was “not a model of the careful drafter’s art” but declining to apply lenity where “text, context, purpose, and what little there is of drafting history all point in the same direction”), and *United States v. Palomares*, 52 F.4th 640, 647 (5th Cir. 2022) (declining to apply lenity where “one approach [stood] prominently above the other interpretations”), with *Ladner v. United States*, 358 U.S. 169, 178 (1958) (applying lenity where the choice between interpretations would “be based on no more than a guess as to what Congress intended”); cf. Einer Elhauge, *Preference-Eliciting Statutory Default Rules*, 102 COLUM. L. REV. 2162, 2196 (2002) (In the criminal law context, “judicial resolution of statutory ambiguities does not tread on the legislative role, but rather executes the legislative instructions as best as judges can.”). Invoking lenity to avoid all ambiguity thwarts the meaning of the text and substitutes our judgment for the People’s about what counts as a crime.⁶

Because our court holds that we have the power to narrow federal criminal law where ambiguity appears, today’s ruling, which conflicts with how every other circuit has interpreted § 921(a)(24), calls into question the range of conduct subject to criminal sanction.⁷ Among other recent

⁶ Such an expansive rule of lenity also “compels judges to abdicate the judicial power without constitutional sanction.” *Baldwin v. United States*, 140 S. Ct. 690, 691 (2020) (Thomas, J., dissenting from denial of certiorari). The Article III judicial power “requires a court to exercise its independent judgment in interpreting and expounding upon the laws” and “include[s] the power to resolve . . . ambiguities.” *Perez v. Mortg. Bankers Ass’n*, 575 U.S. 92, 119 (2015) (Thomas, J., concurring in the judgment). Therefore, when lenity is used as a get-out-of-interpretation-free card—here, to avoid passing on the legality of machineguns—it is especially inconsistent with our constitutional role.

⁷ Of course, most criminal statutes are drafted by state legislatures, responding to imminent and present threats to public safety. Prohibitions on dangerous weapons are myriad. Many ban machineguns and define them, unambiguously I would say, along similar lines as Congress did in 1934. *See, e.g.*, TEX. PENAL CODE § 46.01(9).

decisions, we may have wrongly held that criminal defendants are ineligible for the First Step Act’s “safety valve” provision, 18 U.S.C. § 3553(f), if they fail to meet any one of the statute’s three requirements, *see Palomares*, 52 F.4th at 647, and that 26 U.S.C. § 7202 criminalizes the willful failure to “either truthfully account for taxes or pay them over,” *United States v. Sertich*, 879 F.3d 558, 562 (5th Cir. 2018), because those statutes are not unambiguous. Moreover, given the ambiguities the concurrence perceives in “single function of the trigger” and “automatically,” it is probable that other machineguns cannot be outlawed under § 921(a)(24)—even guns that fire multiple bullets when the shooter holds down the trigger. After all, the concurrence says that it’s plausible that “automatically” means “no human input,” and the pressure needed to depress a trigger is plausibly human input within the meaning of the statute.⁸

The concurrence argues that Congress could pass an “Analogue Act” that would explicitly go device by device, mechanistically, and define bump stocks as machineguns. This would work, the concurrence hypothesizes, because Congress passed a similar statute in the controlled substances context to regulate chemicals that were analogues to drugs named in an earlier act. *See* 21 U.S.C. §§ 802(32)(A), 813, 841(a)(1); *McFadden v. United States*, 576 U.S. 186, 188 (2015). Setting aside the obvious differences between guns and drugs—including the fact that a drug can be described with

⁸ For example, devices called “auto-sears” that allow semiautomatic weapons to fire multiple rounds while the trigger is pulled are increasingly accessible to criminals. *See* Alain Stephens & Keegan Hamilton, *The Return of the Machine Gun*, THE TRACE (Mar. 24, 2022). Even though these devices gravely threaten public safety and law enforcement, *see* Michelle Homer & Melissa Correa, ‘This Has to Stop’: 19 Houston-Area Suspects Charged in Federal Crackdown on Illegal Gun Switches, KHOU (Feb. 24, 2022); Florian Martin, *The Man Who Shot and Killed an HPD Officer Last Week Used an Illegally Modified Handgun, Bodycam Footage Shows*, HOUS. PUB. MEDIA (Oct. 13, 2021), it is uncertain after today’s ruling whether federal law can reach them.

a molecular formula and a gun cannot—the concurrence is mistaken. Under our court’s new lenity regime, it is unclear how Congress could draft such a statute while avoiding ambiguity as to what counts as a bump stock. As I explained, any ambiguity in the statute could be exploited to evade liability because those ambiguities must be construed in favor of defendants.

Indeed, after our court’s ruling today, it is not clear that the Controlled Substance Analogue Enforcement Act of 1986 is even operable in practice. In relevant part, this statute defines a “controlled substance analogue” as a substance “the chemical structure of which is *substantially similar* to the chemical structure of a controlled substance in schedule I or II.” 21 U.S.C. § 802(32)(A)(i) (emphasis added). Whether two substances have a “substantially similar” chemical structure may, in many cases, be ambiguous such that lenity would shield a manufacturer, distributor, or possessor of the analogue. This is not the result Congress intended.

III.

Today, our court extends lenity, once a rule of last resort, to rewrite a vital public safety statute banning machineguns since 1934. In conflict with three other courts of appeals, our court employs its new lenity regime to carve out from federal firearms regulation the bump stock—a device that helped the Las Vegas shooter fire over a thousand rounds during an eleven-minute-long attack, at times shooting about nine bullets per second, killing at least 58 people and wounding hundreds more. *See* Larry Buchanan et al., *What Is a Bump Stock and How Does It Work?*, N.Y. TIMES (updated Mar. 28, 2019). Therefore, our court uses lenity to legalize an instrument of mass murder. This is evident from our court’s attempt to confine its new lenity regime only to this statute, giving machinegun owners immunity from prosecution that is not shared by other offenders under the federal code.

No. 20-51016

For those reasons and the reasons stated in the panel opinion, I respectfully dissent.
